

AIR QUALITY

NDIR* SENSOR

IoT sensor

CFG-APP

Features

The THAQ facilitates the monitoring of your rooms and buildings thanks to its CO₂, VOC (volatile organic compounds), temperature and relative humidity sensors.

Equipped with a LED on the front panel (Green > Orange > Red) clearly indicating the need to ventilate the room, the air quality is displayed locally or the complete measurements are sent to an operated [Sigfox](#) or [LoRaWAN](#) network.

The configuration is done from the tools of the ATIM suite, either locally or remotely: CO₂ thresholds are among other things configurable.

Compatible with the computer and mobile versions of the [IoT web platform](#)**, data visualization, remote parameterization of the sensor and the configuration of alerts according to predefined thresholds are made possible in a few clicks.

Carbon dioxide (CO₂)
Range: 0 to 40000ppm
Precision : +/- 40ppm +5% from 400 to 5000ppm

Volatile Organic Compounds
Range: 0 to 500 VOC
Resolution : 1

Air temperature
Range: -40°C to +125°C
Precision : +/- 0.2°C between -40°C and +80°C

Air humidity : 0% RH to 100% RH
Precision : +/- 2% RH between 0 and 100 % RH

Multifunction visual signal:
- network quality
- air quality
- mode of operation

Interchangeable batteries

Setup via USB, downlink or mobile app

Plug & Play

OPTIMISE AND MONITORE AIR QUALITY

Smart Building

Smart City

Smart Industry

- Children spend most of their time in class, the quality of the air they inhale is a major issue for their health, especially since some VOCs are classified as carcinogenic and high CO2 levels facilitate the spread of the Covid virus.
- Thanks to the LED indicating the air quality according to a precise colour code, teachers will be able to take immediate ventilation measures (LED deactivatable by configuration).
- It has been proven that optimal air quality has an effect on the concentration and well-being of children (less coughing, allergies, etc.).

- The labour code states that for any closed work area, the air must be renewed in order to maintain a pure atmosphere and to avoid exaggerated temperature rises.
- A real time indicator of CO2, VOC, temperature and humidity levels makes it possible to ensure that the air treatment equipment is working properly and to intervene in case of malfunction.
