

# User Guide

## R3000 Quad

Industrial Cellular VPN Router with 4 Ethernet Ports  
4 Eth + 1 RS-232/1 RS-485 + 1 USB Host

robustOS

## About This Document

This document provides hardware and software information of the Robustel R3000 Quad Router, including introduction, installation, configuration and operation.

Copyright©2017 Guangzhou Robustel Technologies Co., Ltd.

All rights reserved.

## Trademarks and Permissions

 robustel,  RobustOS are trademarks of Guangzhou Robustel Technologies Co., Ltd. All other trademarks and trade names mentioned in this document are the property of their respective owners.

## Disclaimer

No part of this document may be reproduced in any form without the written permission of the copyright owner. The contents of this document are subject to change without notice due to continued progress in methodology, design and manufacturing. Robustel shall have no liability for any error or damage of any kind resulting from the use of this document.

## Technical Support

## Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the router is used in a normal manner with a well-constructed network, the router should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Robustel accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the router, or for failure of the router to transmit or receive such data.

## Safety Precautions

### General

- The router generates radio frequency (RF) power. When using the router, care must be taken on safety issues related to RF interference as well as regulations of RF equipment.
- Do not use your router in aircraft, hospitals, petrol stations or in places where using cellular products is prohibited.
- Be sure that the router will not be interfering with nearby equipment. For example: pacemakers or medical equipment. The antenna of the router should be away from computers, office equipment, home appliance, etc.
- An external antenna must be connected to the router for proper operation. Only uses approved antenna with the router. Please contact authorized distributor on finding an approved antenna.
- Always keep the antenna with minimum safety distance of 20 cm or more from human body. Do not put the antenna inside metallic box, containers, etc.
- RF exposure statements
  1. For mobile devices without co-location (the transmitting antenna is installed or located more than 20cm away from the body of user and nearby person)
- FCC RF Radiation Exposure Statement
  1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
  2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and human body.

**Note:** Some airlines may permit the use of cellular phones while the aircraft is on the ground and the door is open. Router may be used at this time.

### Using the Router in Vehicle

- Check for any regulation or law authorizing the use of cellular devices in vehicle in your country before installing the router.
- The driver or operator of any vehicle should not operate the router while driving.
- Install the router by qualified personnel. Consult your vehicle distributor for any possible interference of electronic parts by the router.
- The router should be connected to the vehicle's supply system by using a fuse-protected terminal in the vehicle's fuse box.
- Be careful when the router is powered by the vehicle's main battery. The battery may be drained after extended period.

## Protecting Your Router

To ensure error-free usage, please install and operate your router with care. Do remember the following:

- Do not expose the router to extreme conditions such as high humidity / rain, high temperature, direct sunlight, caustic / harsh chemicals, dust, or water.
- Do not try to disassemble or modify the router. There is no user serviceable part inside and the warranty would be void.
- Do not drop, hit or shake the router. Do not use the router under extreme vibrating conditions.
- Do not pull the antenna or power supply cable. Attach/detach by holding the connector.
- Connect the router only according to the instruction manual. Failure to do it will void the warranty.
- In case of problem, please contact authorized distributor.

## Regulatory and Type Approval Information

**Table 1:** Directives

2011/65/EC	Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS)	
2012/19/EU	Directive 2012/19/EU the European Parliament and of the Council of 4 July 2012 on waste electrical and electronic equipment (WEEE)	

**Table 2:** Standards of the Ministry of Information Industry of the People's Republic of China

SJ/T 11363-2006	"Requirements for Concentration Limits for Certain Hazardous Substances in Electronic Information Products" (2006-06).	
SJ/T 11364-2006	<p>"Marking for Control of Pollution Caused by Electronic Information Products" (2006-06).</p> <p>According to the "Chinese Administration on the Control of Pollution caused by Electronic Information Products" (ACPEIP) the EPUP, i.e., Environmental Protection Use Period, of this product is 20 years as per the symbol shown here, unless otherwise marked. The EPUP is valid only as long as the product is operated within the operating limits described in the Hardware Interface Description.</p> <p>Please see <b>Table 3</b> for an overview of toxic or hazardous substances or elements that might be contained in product parts in concentrations above the limits defined by SJ/T 11363-2006.</p>	

**Table 3:** Toxic or Hazardous Substances or Elements with Defined Concentration Limits

Name of the Part	Hazardous Substances					
	(Pb)	(Hg)	(Cd)	(Cr (VI) )	(PBB)	(PBDE)
Metal parts	o	o	o	o	o	o
Circuit modules	x	o	o	o	o	o
Cables and cable assemblies	o	o	o	o	o	o
Plastic and polymeric parts	o	o	o	o	o	o

o:  
Indicates that this toxic or hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement in SJ/T11363-2006.

x:  
Indicates that this toxic or hazardous substance contained in at least one of the homogeneous materials for this part *might exceed* the limit requirement in SJ/T11363-2006.

# Chapter 1 Product Overview

## 1.1 Key Features

The Robustel Industrial Cellular VPN Router with 4 Ethernet Ports (R3000 Quad) is a rugged cellular router offering state-of-the-art mobile connectivity for machine to machine (M2M) applications. R3000 Quad is a powerful router developed from RobustOS, a Robustel self-developed and Linux-based operating system which is designed to be used in Robustel hardware routers. The RobustOS includes basic networking features and protocols providing customers with a very good user experience. Meanwhile, Robustel offers a Software Development Kit (SDK) for partners and customers to allow additional customization by using C, Python or Java. It also provides rich APPs to meet fragmented IoT market demands.

- The feature *Link Manager* supporting WWAN1, WWAN2, Ethernet WAN, WLAN WAN link backup and ICMP detection
- The option *Backup Mode* supporting cold, warm and load balancing
- Wi-Fi mode supporting AP and Client (2.4 GHz/5 GHz), also supporting Captive Portal
- Dual SIM redundancy for persistent 2G/3G/4G cellular network connections
- RobustOS + SDK + App
- IPsec/OpenVPN/GRE/L2TP/PPTP/DMVPN
- Supporting Modbus RTU to TCP
- Supporting Modbus Master
- Supporting TCP Client/Server, UDP and virtual serial port
- Supporting DHCP server
- Supporting 802.1Q VLAN Trunk protocol
- Supporting IP Pass-through
- Supporting RobustVPN (a Cloud VPN Portal providing easy and secure remote access for PLC and machines)
- Management and maintenance via Web/CLI/USB/RobustLink Cloud
- Alarm via SMS/Email/SNMP trap/RobustLink
- Auto reboot via SMS/Timing
- Desktop and easy wall or DIN rail mounting options

## 1.2 Package Contents

Before installing your R3000 Quad Router, verify the kit contents as following.

**Note:** The following pictures are for illustration purposes only, not based on their actual sizes.

- 1 x Robustel GoRugged R3000 Quad Industrial Cellular VPN Router with 4 Ethernet Ports

- 1 x 3-pin pluggable terminal block with lock for power supply

- 1 x 7-pin pluggable terminal block with lock for serial and console port

- 1 x *Quick Start Guide* with download link of other documents or tools

\*If any of the above items is missing or damaged, please contact your Robustel sales representative.

**Optional accessories** (sold separately):

- 3G/4G SMA cellular antenna (stubby/magnet optional)

Stubby antenna

Magnet antenna

- Wall mounting kit

- 35 mm DIN rail mounting kit

- Ethernet cable

- AC/DC power adapter (12V DC, 1.5 A; EU/US/UK/AU plug optional)

## 1.3 Specifications

### Cellular Interface

- Number of ports: 2 (MAIN + AUX)
- Connector: SMA, female
- SIM: 2 (3.0 V & 1.8 V)
- Standards: GSM/GPRS/EDGE/WCDMA/HSDPA/HSUPA/HSPA+/DC-HSPA+/TD-SCDMA/CDMA(CDMA 1X/EVDO)/FDD LTE/TDD LTE
  - GSM: max DL/UL = 9.6/2.7 Kbps
  - GPRS: max DL/UL = 86 Kbps
  - EDGE: max DL/UL = 236.8 Kbps
  - WCDMA/TD-SCDMA: max DL/UL = 2.8 Mbps/384 Kbps
  - EVDO: max DL/UL = 5.4 Mbps/14.7 Kbps
  - HSPA+: max DL/UL = 21/5.76 Mbps, fallback to 2G
  - DC-HSPA+: max DL/UL = 42/5.76 Mbps, fallback to 2G
  - FDD LTE: max DL/UL = 100/50 Mbps, fallback to 2G/3G
  - TDD LTE: max DL/UL = 100/50 Mbps, fallback to 2G/3G

### Ethernet Interface

- Number of ports: 4 x 10/100 ports(4 x LAN or 3 x LAN + 1 WAN)
- Magnet isolation protection: 1.5 KV

### Wi-Fi Interface

- Number of ports: 1
- Connector: RP-SMA, male
- Standards: 802.11a/b/g/n, supporting AP and Client mode
- Frequency bands: 2.412 - 2.484 GHz (2.4 GHz ISM band)  
4.910 - 5.825 GHz (5 GHz ISM band)
- Security: Open, WPA, WEP
- Encryption: AES, TKIP, WEP64
- Data speed: Up to 150 Mbps

### GPS/GLONASS Interface (Optional)

- Number of ports: 1
- Connector: SMA, female, with 50 ohms impedance
- Tracking sensitivity: GPS: greater than -148 dBm  
GLONASS: greater than -140 dBm
- Horizontal position accuracy: GPS: 2.5 m  
GLONASS: 4.0 m
- Protocol: NMEA-0183 V2.3

### Serial Interface (Software selectable)

- Number of ports: 1 x RS-232 or 1 x RS-485
- Connector: 7-pin pluggable terminal block with lock, female

- Baud rate: 300 bps to 230400 bps
- Parameters: 8E1, 8O1, 8N1, 8N2, 7E2, 7O2, 7N2, 7E1
- RS-232: TxD, RxD, RTS, CTS, GND
- RS-485: Data+ (A), Data- (B)

### Others

- Reset button : 1 x RST
- Expansion: 1 x USB 2.0 host up to 480 Mbps
- SD: 1 x Micro SD interface
- CLI: 1 x CLI interface
- LED indicators: 1 x RUN, 1 x PPP, 1 x USB, 1 x RSSI, 1 x NET, 1 x SIM
- Built-in: RTC, Watchdog, Timer

### Software (Basic features of RobustOS)

- Network protocols: PPP, PPPoE, TCP, UDP, DHCP, ICMP, NAT, HTTP, HTTPS, DNS, ARP, NTP, SMTP, Telnet, VLAN, SSH2, DDNS, etc.
- VPN tunnel: IPsec, OpenVPN, GRE
- Firewall: DMZ, anti-DoS, Filtering (IP/Domain name/MAC address), Port Mapping, Access Control
- Management: Web, CLI, SMS
- Serial port: Transparent, TCP Client/Server, UDP, Modbus RTU Gateway

### App Center

- Available apps for RobustOS: L2TP, PPTP, DMVPN, RobustVPN, VRRP, QoS, SNMP, Language, RobustLink  
\*Request on demand. For more APPs please visit [www.robustel.com](http://www.robustel.com).

### Power Supply and Consumption

- Connector: 5 mm terminal block with lock
- Input voltage: 9~60V DC
- Power consumption: Idle: 100 mA@12 V  
Data link: 400 mA (peak) @12 V

### Physical Characteristics

- Ingress protection: IP30
- Housing & Weight: Metal, 500 g
- Dimensions: 125 x 104 x 43.5 mm
- Installations: Desktop or wall mounting or 35 mm DIN rail mounting

### Certifications

- Approvals & Certificates: CE, EAC, TRA, RCM, RoHS, WEEE
- EMC:
  - EMI: EN 55022: 2006/A1: 2007 (CE & RE) Class B
  - EMS: IEC 61000-4-2 (ESD) Level 3
    - IEC 61000-4-3 (RS) Level 4
    - IEC 61000-4-4 (EFT) Level 4
    - IEC 61000-4-5 (Surge) Level 4

IEC 61000-4-6 (CS) Level 3  
 IEC 61000-4-8 (M/S) Level 4

### 1.4 Dimensions

### 1.5 Ordering Information

Model	R3000-Q3PB	R3000-Q4LB	R3000-QLB
Router Type	HSPA+ Router	LTE Router	Wireline Router
Air Interface	GSM/GPRS/EDGE/HS DPA/HSUPA/HSPA+	GSM/GPRS/EDGE/WCDMA/HSDPA/HSUPA/ HSPA+/DC-HSPA+/TD-SCDMA/CDMA (CDMA 1X/EVDO)/FDD LTE/TDD LTE	--

# Chapter 2 Hardware Installation

## 2.1 LED Indicators

The R3000 Quad has been designed to be placed on a desktop. Below is the front view of the R3000 Quad.

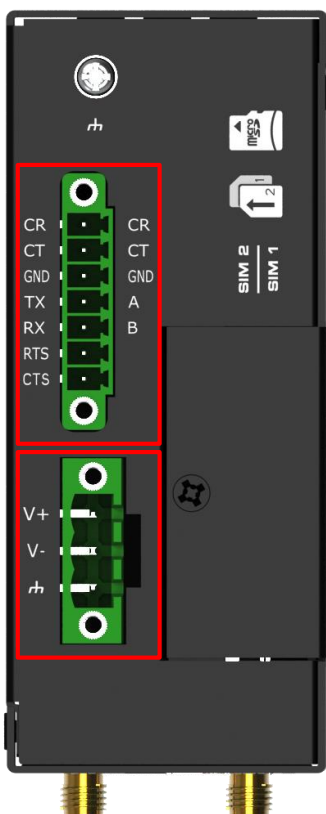

Name	Color	Status	Description
RUN	Green	On, fast blinking (250 mSec blink time)	Router is powered on (System is initializing)
		On, blinking (500 mSec blink time)	Router starts operating
		Off	Router is powered off
PPP	Green	On, solid	Link connection is working
		Off	Link connection is not working
USR-OpenVPN	Green	On, solid	OpenVPN connection is established
		Off	OpenVPN connection is not established
USR-IPsec	Green	On, solid	IPsec connection is established
		Off	IPsec connection is not established
USR-WiFi	Green	On, solid	WiFi is enabled and working properly
		Off	WiFi is disabled or not working properly

	Green	On, solid	High Signal strength (21-31) is available
	Yellow	On, solid	Medium Signal strength (11-20) is available
	Red	On, solid	Low Signal strength (1-10) is available
	/	Off	No signal
NET	Green	On, solid	Connection to 4G network is established
	Yellow	On, solid	Connection to 3G network is established
	Red	On, solid	Connection to 2G network is established
	/	Off	Connection to network is not established or establishing
SIM	Green	On, blinking	Backup card is being used
		Off	Main card is being used

**Note:** You can choose the display type of USR LED. For more details, please refer to **3.28 Service > Advanced**.

## 2.2 PIN Assignment

PIN	Debug	RS-232	RS-485	Direction
1	CR	--	--	Router ← Device
2	CT	--	--	Router → Device
3	GND	GND	GND	--
4	--	TXD	Data+(A)	Router → Device
5	--	RXD	Data+(B)	Router ← Device
6	--	RTS	--	Router → Device
7	--	CTS	--	Router ← Device

PIN	Polarity
8	Positive
9	Negative
10	GND

## 2.3 USB Interface

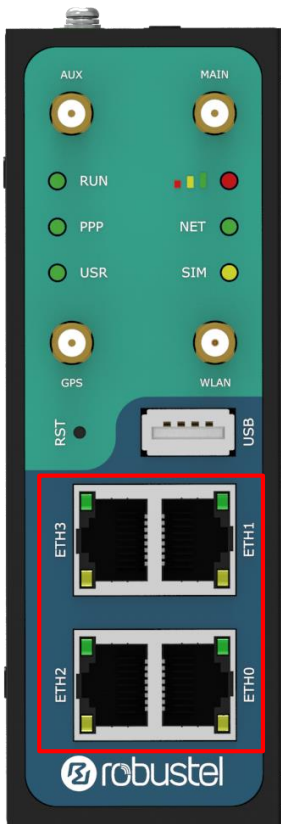

Function	Operation
Firmware upgrade	USB interface is used for batch firmware upgrading, but cannot be used for sending or receiving data from slave devices which connected to it. You can insert a USB storage device into the router’s USB interface, such as a U disk or a hard disk. If there have a supported configuration file or a router firmware in this USB storage device, the router will automatically update the configuration file or the firmware. For more details, see <b>3.11 Interface &gt; USB</b> .

## 2.4 Reset Button

Function	Operation
Reboot	Press and hold the RST button for 5 seconds under the operating status.
Restore to factory default settings	Wait for 5 seconds after powering up the router, press and hold the RST button until all six LEDs start blinking one by one, and release the button to return the router to factory defaults.

## 2.5 Ethernet Port

R3000 Quad Router has four Ethernet port with two LED indicators. The yellow one is link indicator and the green one is speed indicator. For details about status, see the table below.

Indicator	Status	Description
Link indicator	On, solid	Connection is established
	On, blinking	Data is being transferred
	Off	Connection is not established
Speed indicator	On, solid	100 Mbps mode
	Off	10 Mbps mode

## 2.6 Insert or Remove SIM Card/Micro SD Card

Insert or remove the SIM card and SD card as shown in the following steps.

- **Insert SIM card/Micro SD card**

1. Make sure router is powered off.
2. To remove slot cover, loosen the screws associated with the cover by using a screwdriver and then find the SIM card slot/Micro SD card slot.
3. To insert SIM card/Micro SD card, press the card with finger until you hear a click and then tighten the screws associated with the cover by using a screwdriver.
4. To put back the cover and tighten the screws associated with the cover by using a screwdriver.

- **Remove SIM card/Micro SD card**

1. Make sure router is powered off.
2. To remove slot cover, loosen the screws associated with the cover by using a screwdriver and then find the SIM card slot/Micro SD card slot.
3. To remove SIM card/Micro SD card, press the card with finger until it pops out and then take out the card.
4. To put back the cover and tighten the screws associated with the cover by using a screwdriver.

**Note:**

1. Recommended torque for inserting is 1.0 N.m, and the maximum allowed is 1.2 N.m.
2. Use the specific card when the device is working in extreme temperature (temperature exceeding  $40^{\circ}\text{C}$ ), because the regular card for long-time working in harsh environment will be disconnected frequently.
3. Do not forget to twist the cover tightly to avoid being stolen.
4. Do not touch the metal of the card surface in case information in the card will lose or be destroyed.
5. Do not bend or scratch the card.
6. Keep the card away from electricity and magnetism.
7. Make sure router is powered off before inserting or removing the card.

## 2.7 Attach External Antenna (SMA Type)

Attach an external SMA antenna to the router's connector and twist tightly. Make sure the antenna is within the correct frequency range provided by the ISP and with 50 Ohm impedance.

**Note:** Recommended torque for tightening is 0.35 N.m.

## 2.8 Mount the Router

The router can be placed on a desktop or mounted to a wall or a 35 mm DIN rail.

### Two methods for mounting the router

1. Wall mounting  
Wall mounting kit size (measured in mm)

Use 3 pcs of M3\*4 flat head Phillips screws to fix the wall mounting kit to the router, and then use 2 pcs of M3 drywall screws to mount the router associated with the wall mounting kit on the wall.

**Note:** Recommended torque for mounting is 1.0 N.m, and the maximum allowed is 1.2 N.m.

## 2. DIN rail mounting

DIN rail size (measured in mm)

Use 3 pcs of M3\*6 flat head Phillips screws to fix the DIN rail to the router, and then hang the DIN rail on the mounting bracket. It is necessary to choose a standard bracket.

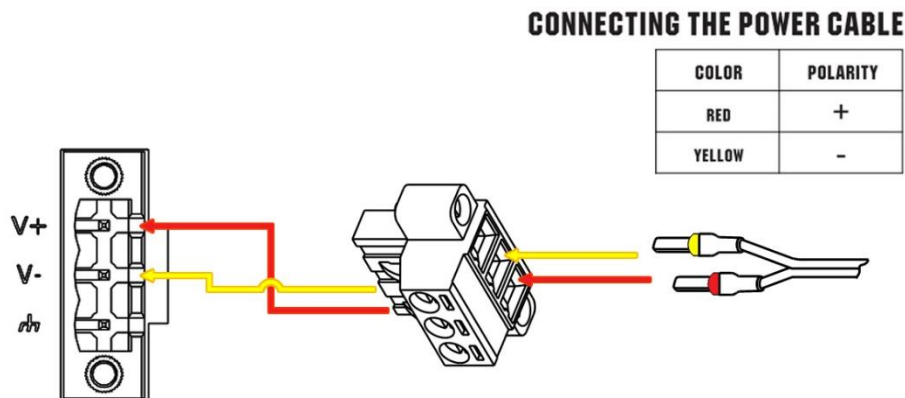

**Note:** Recommended torque for mounting is 1.0 N.m, and the maximum allowed is 1.2 N.m.

## 2.9 Connect the Router to a Computer

Connect an Ethernet cable to any port marked ETH0~ETH3 at the bottom of the router, and connect the other end of the cable to your computer.

## 2.10 Power Supply

R3000 Quad router supports reverse polarity protection, but always refers to the figure above to connect the power adapter correctly. There are two cables associated with the power adapter. Following to the color of the head, connect the cable marked red to the positive pole through a terminal block, and connect the yellow one to the negative in the same way.

**Note:** The range of power voltage is 9 to 60V DC.

## Chapter 3 Initial Configuration

The router can be configured through your web browser that including IE 8.0 or above, Chrome and Firefox, etc. A web browser is included as a standard application in the following operating systems: Linux, Mac OS, Windows 98/NT/2000/XP/Me/Vista/7/8, etc. It provides an easy and user-friendly interface for configuration. There are various ways to connect the router, either through an external repeater/hub or connect directly to your PC. However, make sure that your PC has an Ethernet interface properly installed prior to connecting the router. You must configure your PC to obtain an IP address through a DHCP server or a fixed IP address that must be in the same subnet as the router. If you encounter any problems accessing the router web interface, it is advisable to uninstall your firewall program on your PC, as this tends to cause problems accessing the IP address of the router.

### 3.1 Configure the PC

There are two methods to get IP address for the PC, one is to obtain an IP address automatically from “Local Area Connection”, and another is to configure a static IP address manually within the same subnet of the router. Please refer to the steps below.

Here take **Windows 7** as example, and the configuration for windows system is similar.

1. Click **Start > Control panel**, double-click **Network and Sharing Center**, and then double-click **Local Area Connection**.

2. Click **Properties** in the window of **Local Area Connection Status**.

3. Choose **Internet Protocol Version 4 (TCP/IPv4)** and click **Properties**.

#### 4. Two ways for configuring the IP address of PC.

##### Obtain an IP address automatically:

##### Use the following IP address:

(Configured a static IP address manually within the same subnet of the router)

#### 5. Click **OK** to finish the configuration.

## 3.2 Factory Default Settings

Before configuring your router, you need to know the following default settings.

Item	Description
Username	admin
Password	admin
ETH0	192.168.0.1/255.255.255.0, LAN mode
ETH1	192.168.0.1/255.255.255.0, LAN mode
ETH2	192.168.0.1/255.255.255.0, LAN mode
ETH3	192.168.0.1/255.255.255.0, LAN mode
DHCP Server	Enabled

## 3.3 Log in the Router

To log in to the management page and view the configuration status of your router, please follow the steps below.

1. On your PC, open a web browser such as Internet Explorer, Google and Firefox, etc.
2. From your web browser, type the IP address of the router into the address bar and press enter. The default IP address of the router is [192.168.0.1](https://192.168.0.1/), though the actual address may vary.

3. In the login page, enter the username and password, choose language and then click **LOGIN**. The default username and password are "admin".

**Note:** If enter the wrong username or password over six times, the login web will be locked for 5 minutes.

### 3.4 Control Panel

After logging in, the home page of the R3000 Quad Router’s web interface is displayed, for example.

Using the original password to log in the router, the page will pop up the following tab

It is strongly recommended for security purposes that you change the default username and/or password. To change your username and/or password, see **3.34 System > User Management**.

Control Panel		
Item	Description	Button
Save & Apply	Click to save the current configuration into router’s flash and apply the modification on every configuration page, to make the modification taking effect.	<b>Save &amp; Apply</b>
Reboot	Click to reboot the router. If the Reboot button is yellow, it means that some completed configurations will take effect only after reboot.	<b>Reboot</b>
Logout	Click to log the current user out safely. After logging out, it will switch to login page. Shut down web page directly without logout, the next one can login web on this browser without a password before timeout.	<b>Logout</b>
Submit	Click to save the modification on current configuration page.	<b>Submit</b>
Cancel	Click to cancel the modification on current configuration page.	<b>Cancel</b>

**Note:** The steps of how to modify configuration are as bellow:

1. Modify in one page;
2. Click **Submit** under this page;
3. Modify in another page;
4. Click **Submit** under this page;
5. Complete all modification;
6. Click **Save & Apply**.

## 3.5 Status

This page allows you to view the System Information, Internet Status and LAN Status of your router.

### System Information

^ System Information	
<b>Device Model</b>	R3000 Quad
<b>System Uptime</b>	0 days, 00:10:58
<b>System Time</b>	Sun May 28 11:46:34 2017
<b>RAM Usage</b>	81M Free/128M Total
<b>Firmware Version</b>	3.0.0
<b>Hardware Version</b>	1.0
<b>Kernel Version</b>	4.1.0
<b>Serial Number</b>	10201726051044

System Information	
Item	Description
Device Model	Show the model name of your device.
System Uptime	Show the current amount of time the router has been connected.
System Time	Show the current system time.
RAM Usage	Show the free memory and the total memory.
Firmware Version	Show the firmware version running on the router.
Hardware Version	Show the current hardware version.
Kernel Version	Show the current kernel version.
Serial Number	Show the serial number of your device.

## Internet Status

^ Internet Status	
<b>Active Link</b>	WWAN1
<b>Uptime</b>	0 days, 00:09:55
<b>IP Address</b>	10.166.62.76/255.255.255.248
<b>Gateway</b>	10.166.62.77
<b>DNS</b>	120.80.80.80 221.5.88.88

Internet Status	
Item	Description
Active Link	Show the current active link.
Uptime	Show the current amount of time the link has been connected.
IP Address	Show the IP address of current link.
Gateway	Show the gateway address of the current link.
DNS	Show the current primary DNS server and secondary server.

## LAN Status

^ LAN Status	
<b>IP Address</b>	172.16.7.29/255.255.255.0
<b>MAC Address</b>	34:FA:40:04:8E:38

LAN Status	
Item	Description
IP Address	Show the IP address and the Netmask of the router.
MAC Address	Show the MAC address of the router.

## 3.6 Interface > Link Manager

This section allows you to setup the link connection.

Link Manager
Status

^ General Settings

Primary Link  ?

Backup Link  ?

Backup Mode  ?

Revert Interval  ?

Emergency Reboot  ON  OFF ?

General Settings @ Link Manager		
Item	Description	Default
Primary Link	Select from "WWAN1", "WWAN2", "WAN" or "WLAN". <ul style="list-style-type: none"> <li>WWAN1: Select to make SIM1 as the primary wireless link</li> <li>WWAN2: Select to make SIM2 as the primary wireless link</li> <li>WAN: Select to make WAN as the primary wire link</li> <li>WLAN: Select to make WLAN as the primary wireless link</li> </ul> <b>Note:</b> WLAN link is available only if enable WiFi as Client mode, please refer to <b>3.10 Interface &gt; WiFi</b> .	WWAN1
Backup Link	Select from "None", "WWAN1", "WWAN2", "WAN" or "WLAN". <ul style="list-style-type: none"> <li>None: Do not select any backup link</li> <li>WWAN1: Select to make SIM1 as backup wireless link</li> <li>WWAN2: Select to make SIM2 as backup wireless link</li> <li>WAN: Select to make WAN as the primary wire link</li> <li>WLAN: Select to make WLAN as the primary wireless link</li> </ul> <b>Note:</b> WLAN link is available only if enable WiFi as Client mode, please refer to <b>3.10 Interface &gt; WiFi</b> . General Settings @ Access Point		
Item	Description	Default
Enable	Click the toggle button to enable/disable the WiFi access point option.	OFF
Band	Select from “2.4G” or “5G”.	2.4G
Bandwidth	Select from “20MHz”, “40MHz”. 40 MHz channel width provides twice the data rate available over a single 20 MHz channel.	20MHz
Channel	Select the frequency channel, including “Auto”, “1”, “2” ..... “13”. <ul style="list-style-type: none"> <li>• Auto: Router will scan all frequency channels until the best one is found</li> <li>• 1~13 Router will be fixed to work with this channel Following are the frequency of 1~13 channel:</li> </ul> 1: 2412 MHz 2: 2417 MHz 3: 2422 MHz 4: 2427 MHz 5: 2432 MHz 6: 2437 MHz 7: 2442 MHz 8: 2447 MHz 9: 2452 MHz 10: 2457 MHz 11: 2462 MHz 12: 2467 MHz 13: 2472 MHz	Auto

General Settings @ Access Point		
Item	Description	Default
SSID	Enter the Service Set Identifier, the name of your wireless network. The SSID of a client and the SSID of the AP must be identical for the client and AP to be able to communicate with each other. Enter 1 to 32 characters.	router
Broadcast SSID	Click the toggle button to enable/disable the SSID being broadcast. When enabled, the client can scan your SSID. When disabled, the client cannot scan your SSID. If you want to connect to the router AP, you need to manually enter the SSID of router AP at WiFi client side.	ON
Security Mode	Select from "Disabled", "WPA" or "WEP". <ul style="list-style-type: none"> <li>Disabled: User can access the WiFi without password <b>Note:</b> It is strongly recommended for security purposes that you do not choose this kind of mode.</li> <li>WPA: Include WPA and WPA2. Personal versions of WPA (Wi-Fi Protected Access), also known as WPA/WPA-PSK (Pre-Shared Key), provide a simple way of encrypting a wireless connection for high confidentiality.</li> <li>WEP: Wired Equivalent Privacy provides encryption for wireless device's data transmission</li> </ul>	Disabled
WPA Version	Select from "Auto", "WPA" or "WPA2". <ul style="list-style-type: none"> <li>Auto: Router will choose automatically the most suitable WPA version</li> <li>WPA2 is a stronger security feature than WPA</li> </ul>	Auto
Encryption	Select from "Auto", "TKIP" or "AES". <ul style="list-style-type: none"> <li>Auto: Router will choose automatically the most suitable encryption</li> <li>TKIP: Temporal Key Integrity Protocol (TKIP) encryption uses a wireless connection. TKIP encryption can be used for WPA-PSK and WPA 802.1x authentication <b>Note:</b> It's not recommended to use TKIP encryption in 802.11n mode.</li> <li>AES: AES encryption uses a wireless connection. AES can be used for CCMP WPA-PSK and WPA 802.1x authentication. AES is a stronger encryption algorithm than TKIP</li> </ul>	Auto
PSK Password	Enter the Pre share key password. When router works as AP mode, enter Master key to generate keys for encryption. A PSK Password is used as a basis for encryption methods (or cipher types) in a WLAN connection. The PSK Password should be complicated and as long as possible. For security reasons, this PSK Password should only be disclosed to users who need it, and it should be changed regularly. Enter 8 to 63 characters.	Null
Group Key Update Interval	Enter the time period of group key renewal.	3600

General Settings @ Access Point		
Item	Description	Default
WEP Key	Enter the WEP key. The key length should be 10 or 26 hexadecimal digits depending on which WEP key is used, 64 digits or 128 digits.	Null
RTS/CTS Threshold	Specify the RTS (request to send) threshold or CTS (clear to send) threshold and digits from 256 to 2346. The router AP will never send the signal before sending out data if setting the RTS threshold as 2347, and the router AP will send the signal once it sending out data if setting the RTS threshold as 0.	2346
Transmit Rat	Set the transmit rate. You can choose Auto or specify a Transmit Rate, including 1Mbps, 2Mbps, 5.5Mbps, 6Mbps, 11Mbps, 12Mbps, 18Mbps, 24Mbps, 36Mbps, 48Mbps, 54Mbps, MCS0, MCS1, MCS2, MCS3, MCS4, MCS5, MCS6 and MCS7.	Auto
Debug Level	Select from “verbose”, “debug”, “info”, “notice”, “warning” or “none”.	none

### 3.12 Interface > Serial Port

This section allows you to set the serial port parameters. R3000 Quad Router supports one RS-232 or one RS-485 across a 7-pin terminal block with lock. Serial port provides a way to transfer serial data to IP data, or vice versa, and transmit these data via wired or wireless network to achieve data transparent transmission.

Serial Port		Status
^ Serial Port Settings		
Index	Port	Enable Baud Rate Application Mode
1	COM1	false 115200 Transparent

Click the edit button of COM1.

Serial Port		
Item	Description	Default
<b>Serial Port Application Settings</b>		
Index	Indicate the ordinal of the list.	--
Port	Show the current serial's name, read only.	COM1
Enable	Click the toggle button to enable/disable this serial port. When the status is OFF, the serial port is not available.	OFF
Baud Rate	Select from "300", "600", "1200", "2400", "4800", "9600", "19200", "38400",	115200

	"57600" , "115200" or "230400".	
Data Bits	Select from "7" or "8".	8
Stop Bits	Select from "1" or "2".	1
Parity	Select from "None", "Odd" or "Even".	None
Flow control	Select from "None", "Software" or "Hardware".	None
Data Packing		
Packing Timeout	Set the packing timeout. The serial port will queue the data in the buffer and send the data to the Cellular WAN/Ethernet WAN when it reaches the Interval Timeout in the field. <b>Note:</b> Data will also be sent as specified by the packet length even when data is not reaching the interval timeout in the field.	50
Packing Length	Set the packet length. The Packet length setting refers to the maximum amount of data that is allowed to accumulate in the serial port buffer before sending. When a packet length between 1 and 3000 bytes is specified, data in the buffer will be sent as soon it reaches the specified length.	1200

Index	Type	TX	RX	Connection Status
1	RS485	0B	0B	

**Note:** To change your serial type, please contact your Robustel sales representative.

### 3.13 Network > Route

This section allows you to set the static route. Static route is a form of routing that occurs when a router uses a manually-configured routing entry, rather than information from a dynamic routing traffic. Route Information Protocol (RIP) is widely used in small network with stable use rate. Open Shortest Path First (OSPF) is made router within a single autonomous system and used in large network.

Local Port	<input style="width: 95%;" type="text"/> <span style="float: right; color: blue;">?</span>
Protocol	<input style="width: 95%;" type="text" value="TCP-UDP"/> <span style="float: right;">v</span>

Port Mapping Rules		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Description	Enter a description for this port mapping.	Null
Remote IP	Specify the host or network which can access the local IP address. Empty means unlimited, e.g. 10.10.10.10/255.255.255.255 or 192.168.1.0/24	Null
Internet Port	Enter the internet port of router which can be accessed by other hosts from internet.	Null
Local IP	Enter router's LAN IP which will forward to the internet port of router.	Null
Local Port	Enter the port of router's LAN IP.	Null
Protocol	Select from "TCP", "UDP" or "TCP-UDP" as your application required.	TCP-UDP

## DMZ

DMZ host is a host on the internal network that has all ports exposed, except those ports otherwise forwarded.

DMZ Settings		
Item	Description	Default
Enable DMZ	Click the toggle button to enable/disable DMZ.	OFF
Host IP Address	Enter the IP address of the DMZ host on your internal network.	Null
Source IP Address	Set the address which can talk to the DMZ host. Null means for any addresses.	Null

### 3.15 Network > IP Passthrough

Click **Network > IP Passthrough > IP Passthrough** to enable or disable the IP Pass-through option.

If router enables the IP Pass-through, the terminal device (such as PC) will enable the DHCP Client mode and connect to LAN port of the router; and after the router dial up successfully, the PC will automatically obtain the IP address and DNS server address which assigned by ISP.

### 3.16 VPN > IPsec

This section allows you to set the IPsec and the related parameters. Internet Protocol Security (IPsec) is a protocol suite for secure Internet Protocol (IP) communications that works by authenticating and encrypting each IP packet of a communication session.

#### General

General Settings @ General		
Item	Description	Default
Enable NAT Traversal	Click the toggle button to enable/disable the NAT Traversal function. This option must be enabled when router under NAT environment.	ON
Keepalive	Set the keepalive time, measured in seconds. The router will send packets to NAT server every keepalive time to avoid record remove from the NAT list.	60
Debug Enable	Click the toggle button to enable/disable this option. Enable for IPsec VPN information output to the debug port.	OFF

## Tunnel

Click **+** to add tunnel settings. The maximum count is 3.

General Settings @ Tunnel		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Enable	Click the toggle button to enable/disable this IPsec tunnel.	ON
Description	Enter a description for this IPsec tunnel.	Null
Gateway	Enter the address of remote IPsec VPN server. 0.0.0.0 represents for any address.	Null
Mode	Select from "Tunnel" and "Transport". <ul style="list-style-type: none"> <li>Tunnel: Commonly used between gateways, or at an end-station to a gateway, the gateway acting as a proxy for the hosts behind it</li> <li>Transport: Used between end-stations or between an end-station and a gateway, if the gateway is being treated as a host-for example, an encrypted Telnet session from a workstation to a router, in which the router is the actual</li> </ul>	Tunnel

	destination	
Protocol	Select the security protocols from “ESP” and “AH”. <ul style="list-style-type: none"> <li>• ESP: Use the ESP protocol</li> <li>• AH: Use the AH protocol</li> </ul>	ESP
Local Subnet	Enter the local subnet’s address with mask protected by IPsec, e.g. 192.168.1.0/24	Null
Remote Subnet	Enter the remote subnet’s address with mask protected by IPsec, e.g. 10.8.0.0/24	Null

IKE Settings		
Item	Description	Default
Negotiation Mode	Select from “Main” and “Aggressive” for the IKE negotiation mode in phase 1. If the IP address of one end of an IPsec tunnel is obtained dynamically, the IKE negotiation mode must be aggressive. In this case, SAs can be established as long as the username and password are correct.	Main
Authentication Algorithm	Select from “MD5”, “SHA1”, “SHA2 256” or “SHA2 512” to be used in IKE negotiation.	MD5
Encrypt Algorithm	Select from “3DES”, “AES128” and “AES256” to be used in IKE negotiation. <ul style="list-style-type: none"> <li>3DES: Use 168-bit 3DES encryption algorithm in CBC mode</li> <li>AES128: Use 128-bit AES encryption algorithm in CBC mode</li> <li>AES256: Use 256-bit AES encryption algorithm in CBC mode</li> </ul>	3DES

IKE Settings		
Item	Description	Default
IKE DH Group	Select from “DHgroup2”, “DHgroup5”, “DHgroup14”, “DHgroup15”, “DHgroup16”, “DHgroup17” or “DHgroup18” to be used in key negotiation phase 1.	DHgroup2
Authentication Type	Select from “PSK”, “CA”, “xAuth PSK” and “xAuth CA” to be used in IKE negotiation. <ul style="list-style-type: none"> <li>PSK: Pre-shared Key</li> <li>CA: x509 Certificate Authority</li> <li>xAuth: Extended Authentication to AAA server</li> </ul>	PSK
PSK Secret	Enter the pre-shared key.	Null
Local ID Type	Select from “Default”, “FQDN” and “User FQDN” for IKE negotiation. <ul style="list-style-type: none"> <li>Default: Use an IP address as the ID in IKE negotiation</li> <li>FQDN: Use an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security gateway, e.g., test.robustel.com.</li> <li>User FQDN: Use a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign “@” for the local security gateway, e.g., test@robustel.com.</li> </ul>	Default
Remote ID Type	Select from “Default”, “FQDN” and “User FQDN” for IKE negotiation. <ul style="list-style-type: none"> <li>Default: Use an IP address as the ID in IKE negotiation</li> <li>FQDN: Use an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security gateway, e.g., test.robustel.com.</li> <li>User FQDN: Use a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign “@” for the local security gateway, e.g., test@robustel.com.</li> </ul>	Default
IKE Lifetime	Set the lifetime in IKE negotiation. Before an SA expires, IKE negotiates a new SA. As soon as the new SA is set up, it takes effect immediately and the old one will be cleared automatically when it expires.	86400
Private Key Password	Enter the private key under the “CA” and “xAuth CA” authentication types.	Null
Username	Enter the username used for the “xAuth PSK” and “xAuth CA” authentication types.	Null
Password	Enter the password used for the “xAuth PSK” and “xAuth CA” authentication types.	Null

If click **VPN > IPsec > Tunnel > General Settings**, and choose **ESP** as protocol. The specific parameter configuration is shown as below.

^ **General Settings**

**Expert Options**  ?

SA Settings		
Item	Description	Default
Encrypt Algorithm	Select from "3DES", "AES128" or "AES256" when you select "ESP" in "Protocol". Higher security means more complex implementation and lower speed. DES is enough to meet general requirements. Use 3DES when high confidentiality and security are required.	3DES
Authentication Algorithm	Select from "MD5", "SHA1", "SHA2 256" or "SHA2 512" to be used in SA negotiation.	MD5
PFS Group	Select from "DHgroup2", "DHgroup5", "DHgroup14", "DHgroup15", "DHgroup16", "DHgroup17" or "DHgroup18" to be used in SA negotiation.	DHgroup2
SA Lifetime	Set the IPsec SA lifetime. When negotiating set up IPsec SAs, IKE uses the smaller one between the lifetime set locally and the lifetime proposed by the peer.	28800
DPD Interval	Set the interval after which DPD is triggered if no IPsec protected packets is received from the peer. DPD is Dead peer detection. DPD irregularly detects dead IKE peers. When the local end sends an IPsec packet, DPD checks the time the last IPsec packet was received from the peer. If the time exceeds the DPD interval, it sends a DPD hello to the peer. If the local end receives no DPD acknowledgment within the DPD packet retransmission interval, it retransmits the DPD hello. If the local end still receives no DPD acknowledgment after having made the maximum number of retransmission attempts, it considers the peer already dead, and clears the IKE SA and the IPsec SAs based on the IKE SA.	60
DPD Failures	Set the timeout of DPD (Dead Peer Detection) packets.	180
Advanced Settings		
Enable Compression	Click the toggle button to enable/disable this option. Enable to compress the inner headers of IP packets.	OFF
Expert Options	Add more PPP configuration options here, format: config-desc;config-desc, e.g. protostack=netkey;plutodebug=none	Null

## Status

This section allows you to view the status of the IPsec tunnel.

## 3.17 VPN > OpenVPN

This section allows you to set the OpenVPN and the related parameters. OpenVPN is an open-source software application that implements virtual private network (VPN) techniques for creating secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. Router supports point-to-point and point-to-points connections.

Local Virtual Netmask	Set the local virtual Netmask of the GRE tunnel.	Null
Remote Virtual IP Address	Set the remote virtual IP Address of the GRE tunnel.	Null
Enable Default Route	Click the toggle button to enable/disable this option. When enabled, all the traffics of the router will go through the GRE VPN.	OFF
Enable NAT	Click the toggle button to enable/disable this option. This option must be enabled when router under NAT environment.	OFF
Secrets	Set the key of the GRE tunnel.	Null

## Status

This section allows you to view the status of GRE tunnel.

Index	Description	Status	Local IP Address	Remote IP Address	Uptime
-------	-------------	--------	------------------	-------------------	--------

## 3.19 Services > Syslog

This section allows you to set the syslog parameters. The system log of the router can be saved in the local, also supports to be sent to remote log server and specified application debugging. By default, the “Log to Remote” option is disabled.

**Syslog Settings**

Enable:  ON  OFF

Syslog Level: Debug

Save Position: RAM

Log to Remote:  ON  OFF

The window is displayed as below when enabling the “Log to Remote” option.

**Syslog Settings**

Enable:  ON  OFF

Syslog Level: Debug

Save Position: RAM

Log to Remote:  ON  OFF

Add Identifier:  ON  OFF

Remote IP Address:

Remote Port: 514

Syslog Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the Syslog settings option.	OFF
Syslog Level	Select from "Debug", "Info", "Notice", "Warning" or "Error", which from low to high. The lower level will output more syslog in details.	Debug
Save Position	Select the save position from "RAM", "NVM" or "Console". Choose "RAM". The data will be cleared after reboot. <b>Note:</b> It's not recommended that you save syslog to NVM (Non-Volatile Memory) for a long time.	RAM
Log to Remote	Click the toggle button to enable/disable this option. Enable to allow router sending syslog to the remote syslog server. You need to enter the IP and Port of the syslog server.	OFF
Add Identifier	Click the toggle button to enable/disable this option. When enabled, you can add serial number to syslog message which used for loading Syslog to RobustLink.	OFF
Remote IP Address	Enter the IP address of syslog server when enabling the "Log to Remote" option.	Null
Remote Port	Enter the port of syslog server when enabling the "Log to Remote" option.	514

### 3.20 Services > Event

This section allows you to set the event parameters. Event feature provides an ability to send alerts by SMS or Email when certain system events occur.

General Settings @ Event		
Item	Description	Default
Signal Quality Threshold	Set the threshold for signal quality. Router will generate a log event when the actual threshold is less than the specified threshold. 0 means disable this option.	0

Click **+** button to add an Event parameters.

**Notification**

Enable TLS/SSL	Click the toggle button to enable/disable the TLS/SSL option.	OFF

Email Settings		
Item	Description	Default
Outgoing server	Enter the SMTP server IP Address or domain name.	Null
Server port	Enter the SMTP server port.	25
Timeout	Set the max time for sending email to SMTP server. When the server doesn't receive the email over this time, it will try to resend.	10
Username	Enter the username which has been registered from SMTP server.	Null
Password	Enter the password of the username above.	Null
From	Enter the source address of the email.	Null
Subject	Enter the subject of this email.	Null

### 3.24 Services > DDNS

This section allows you to set the DDNS parameters. The Dynamic DNS function allows you to alias a dynamic IP address to a static domain name, allows you whose ISP does not assign them a static IP address to use a domain name. This is especially useful for hosting servers via your connection, so that anyone wishing to connect to you may use your domain name, rather than having to use your dynamic IP address, which changes from time to time. This dynamic IP address is the WAN IP address of the router, which is assigned to you by your ISP. The service provider defaults to "DynDNS", as shown below.

The screenshot shows the 'DDNS Settings' window. At the top, there are tabs for 'DDNS' and 'Status'. Below the title bar, there is an 'Enable' toggle switch currently set to 'OFF'. A red box highlights the 'Service Provider' dropdown menu, which is set to 'DynDNS'. Below this, there are input fields for 'Hostname', 'Username', and 'Password', all of which are currently empty.

When "Custom" service provider chosen, the window is displayed as below.

The screenshot shows the 'DDNS Settings' window with the 'Service Provider' dropdown menu set to 'Custom'. A red box highlights this dropdown. Below the dropdown, there is an input field labeled 'URL' which is currently empty. The 'Enable' toggle switch remains 'OFF'.

DDNS Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the DDNS option.	OFF
Service Provider	Select the DDNS service from "DynDNS", "NO-IP", "3322" or "Custom". <b>Note:</b> the DDNS service only can be used after registered by	DynDNS

	Corresponding service provider.	
Hostname	Enter the hostname provided by the DDNS server.	Null
Username	Enter the username provided by the DDNS server.	Null
Password	Enter the password provided by the DDNS server.	Null
URL	Enter the URL customized by user.	Null

Click "Status" bar to view the status of the DDNS.

The screenshot shows a navigation bar with 'DDNS' and 'Status' tabs. Below it is a section titled '^ DDNS Status'. Inside this section, there is a 'Status' label with the value 'Disabled' and a 'Last Update Time' label.

DDNS Status	
Item	Description
Status	Display the current status of the DDNS.
Last Update Time	Display the date and time for the DDNS was last updated successfully.

### 3.25 Services > SSH

Router supports SSH password access and secret-key access.

The screenshot shows a navigation bar with 'SSH' and 'Keys Management' tabs. Below it is a section titled '^ SSH Settings'. It contains three settings: 'Enable' with a toggle set to 'ON', 'Port' with a text input field containing '22', and 'Disable Password Logins' with a toggle set to 'OFF'.

SSH Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable this option. When enabled, you can access the router via SSH.	ON
Port	Set the port of the SSH access.	22
Disable Password Logins	Click the toggle button to enable/disable this option. When enabled, you cannot use username and password to access the router via SSH. In this case, only the key can be used for login.	OFF

The screenshot shows a navigation bar with 'SSH' and 'Keys Management' tabs. Below it is a section titled '^ Import Authorized Keys'. It features a label 'Authorized Keys', a file selection button that says 'Choose File' and 'No file chosen', and an 'Import' button.

Import Authorized Keys	
Item	Description
Authorized Keys	Click on “Choose File” to locate an authorized key from your computer, and then click “Import” to import this key into your router. <b>Note:</b> This option is valid when enabling the password logins option.

### 3.26 Services > GPS

This section allows you to set the GPS setting parameters.

The screenshot shows the GPS configuration interface. At the top, there are three tabs: 'GPS', 'Status', and 'Map'. Below the tabs is a section titled 'General Settings' with a toggle for 'Enable GPS' set to 'ON'. Below that is a section titled 'GPS Server' which contains a table with columns: Index, Enable, Protocol, Local Address, Local Port, Server Address, and Server Port. A plus sign is visible at the end of the table header.

General Settings @ GPS		
Item	Description	Default
Enable	Click the toggle button to enable/disable the GPS option.	ON

The window is displayed as below when choosing “TCP Client” as the protocol.

The screenshot shows the 'Server Settings' section of the GPS configuration. It includes fields for 'Index' (set to 1), 'Enable' (toggle ON), 'Protocol' (dropdown menu set to 'TCP Client', highlighted with a red box), 'Server Address', and 'Server Port'. Below these are four rows of 'Send' options, each with a toggle: 'Send GGA Sentence' (ON), 'Send VTG Sentence' (OFF), 'Send RMC Sentence' (OFF), and 'Send GSV Sentence' (OFF).

The window is displayed as below when choosing “TCP Server” as the protocol.

The screenshot shows the 'Server Settings' window. The 'Protocol' dropdown menu is set to 'TCP Server' and is highlighted with a red rectangular box. Other visible fields include 'Index' (1), 'Enable' (ON), 'Local Address', 'Local Port', and several 'Send' toggle buttons for GGA, VTG, RMC, and GSV sentences, all currently set to OFF.

The window is displayed as below when choosing “UDP” as the protocol.

The screenshot shows the 'Server Settings' window with the 'Protocol' dropdown menu set to 'UDP', highlighted by a red rectangular box. The 'Server Address' and 'Server Port' fields are visible, along with the same 'Send' toggle buttons for GGA, VTG, RMC, and GSV sentences, all currently set to OFF.

Server Settings		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Enable	Click the toggle button to enable/disable the GPS server settings.	ON
Protocol	Select from “TCP Client”, “TCP Server” or “UDP”.	TCP Client
Server Address @TCP Client	Set the address of the TCP Client.	Null
Server Port @TCP Client	Set the port of the remote TCP Server.	Null
Local Address	Set the local address when the router set as a TCP Server.	Null
Local Port	Set the local port when the router set as a TCP Server.	Null
Server Address @ UDP	Set the address of the TCP Server.	Null
Server Port @ UDP	Set the port of the remote TCP Server.	Null

Server Settings		
Item	Description	Default
Send GGA Sentence	Send GGA information in NMEA format.	OFF
Send VTG Sentence	Send VTG information in NMEA format.	OFF
Send RMC Sentence	Send RMC information in NMEA format.	OFF
Send GSV Sentence	Send GSV information in NMEA format.	OFF

Item	Description
Status	Show the GPS Status. GPS status includes “NO Fix”, “2D Fix” and “3D Fix”.
UTC Time	Show the UTC of satellites, which is world unified time, not local time.
Latitude	Show the latitude status of router.
Longitude	Show the longitude status of router.
Altitude	Show the altitude status of router.
Speed	Show the horizontal speed of router.

Click “Map” column to view the current location of the router.

### 3.27 Services > Web Server

This section allows you to modify the parameters of Web Server.

General Settings @ Web Server		
Item	Description	Default
HTTP Port	Enter the HTTP port number you want to change in router’s Web Server. On a Web server, port 80 is the port that the server "listens to" or expects to receive from a Web client. If you configure the router with other HTTP Port number except 80, only adding that port number then you can login router’s Web Server.	80
HTTPS Port	Enter the HTTPS port number you want to change in router’s Web Server. On a Web server, port 443 is the port that the server "listens to" or expects to	443

	<p>receive from a Web client. If you configure the router with other HTTPS Port number except 443, only adding that port number then you can login router’s Web Server.</p> <p><b>Note:</b> HTTPS is more secure than HTTP. In many cases, clients may be exchanging confidential information with a server, which needs to be secured in order to prevent unauthorized access. For this reason, HTTP was developed by Netscape corporation to allow authorization and secured transactions.</p>	
--	--	--

This section allows you to import the certificate file into the route.

Import Certificate		
Item	Description	Default
Import Type	Select from “CA” and “Private Key”. <ul style="list-style-type: none"> <li>CA: a digital certificate issued by CA center</li> <li>Private Key: a private key file</li> </ul>	CA
HTTPS Certificate	Click on “Choose File” to locate the certificate file from your computer, and then click “Import” to import this file into your router.	--

### 3.28 Services > Advanced

This section allows you to set the Advanced and parameters.

System Settings		
Item	Description	Default
Device Name	Set the device name to distinguish different devices you have installed; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	router
User LED Type	Specify the display type of your USR LED. Select from “None”, “OpenVPN”,	None

	<p>“IPSec” or “WiFi”.</p> <ul style="list-style-type: none"> <li>• None: Meaningless indication, and the LED is off</li> <li>• OpenVPN: USR indicator showing the OpenVPN status</li> <li>• IPSec: USR indicator showing the IPsec status</li> <li>• WiFi: USR indicator showing the WiFi status</li> </ul> <p><b>Note:</b> For more details about USR indicator, see “2.1 LED Indicators”.</p>

Status	Show the status of the App.	Null
Description	Show the description for this App.	Null

### 3.32 System > Tools

This section provides users three tools: Ping, Traceroute and Sniffer.

Ping
Traceroute
Sniffer

^ Ping

IP Address

Number of Request

Timeout

Local IP

Start
Stop

Ping		
Item	Description	Default
IP address	Enter the ping's destination IP address or destination domain.	Null
Number of Requests	Specify the number of ping requests.	5
Timeout	Specify the timeout of ping requests.	1
Local IP	Specify the local IP from cellular WAN, Ethernet WAN or Ethernet LAN. Null stands for selecting local IP address from these three automatically.	Null
<span style="background-color: #2e8b57; color: white; padding: 2px 5px; border: 1px solid #ccc;">Start</span>	Click this button to start ping request, and the log will be displayed in the follow box.	Null
<span style="background-color: #ccc; padding: 2px 5px; border: 1px solid #ccc;">Stop</span>	Click this button to stop ping request.	--

Ping | Traceroute | Sniffer

**Traceroute**

Trace Address   
 Trace Hops   
 Trace Timeout

Start Stop

Traceroute		
Item	Description	Default
Trace Address	Enter the trace's destination IP address or destination domain.	Null
Trace Hops	Specify the max trace hops. Router will stop tracing if the trace hops has met max value no matter the destination has been reached or not.	30
Trace Timeout	Specify the timeout of Traceroute request.	1
<span>Start</span>	Click this button to start Traceroute request, and the log will be displayed in the follow box.	--
<span>Stop</span>	Click this button to stop Traceroute request.	--

Ping | Traceroute | Sniffer

**Sniffer**

Interface  v  
 Host   
 Packets Request   
 Protocol  v  
 Status

Start Stop

**Capture Files**

Index	File Name	File Size	Modification Time
1	17-05-28_12-52-05.cap	24	Sun May 28 12:52:05 2017

Sniffer		
Item	Description	Default
Interface	Choose the interface according to your Ethernet configuration.	All
Host	Filter the packet that contain the specify IP address.	Null
Packets Request	Set the packet number that the router can sniffer at a time.	1000
Protocol	Select from "All", "IP", "TCP", "UDP" and "ARP".	All
Port	Set the port number for TCP or UDP that is used in sniffer.	Null
Status	Show the current status of sniffer.	Null
	Click this button to start the sniffer.	--
	Click this button to stop the sniffer. Once you click this button, a new log file will be displayed in the following List.	--
Capture Files	Every times of sniffer log will be saved automatically as a new file. You can find the file from this Sniffer Traffic Data List and click  to download the log, click  to delete the log file. It can cache a maximum of 5 files.	Null

### 3.33 System > Profile

This section allows you to import or export the configuration file, and restore the router to factory default setting.

Rollback		
Item	Description	Default
<b>Configuration Rollback</b>		
Save as a Rollbackable Archive	Create a save point manually. Additionally, the system will create a save point every day automatically if configuration changes.	--
<b>Configuration Archive Files</b>		
Configuration Archive Files	View the related information about configuration archive files, including name, size and modification time.	--

### 3.34 System > User Management

This section allows you to change your username and password, and create or manage user accounts. One router has only one super user who has the highest authority to modify, add and manage other common users.

**Note:** Your new password must be more than 5 character and less than 32 characters and may contain numbers, upper and lowercase letters, and standard symbols.

Super User

# Chapter 4 Configuration Examples

## 4.1 Cellular

### 4.1.1 Cellular Dial-Up

This section shows you how to configure the primary and backup SIM card for Cellular Dial-up. Connect the router correctly and insert two SIM, then open the configuration page. Under the homepage menu, click **Interface > Link Manager > Link Manager > General Settings**, choose “WWAN1” as the primary link, “WWAN2” as the backup link and “Cold Backup” as the backup mode.

The screenshot shows the 'Link Manager' interface. The top navigation bar has 'Link Manager' and 'Status' tabs. The 'General Settings' section includes:

- Primary Link: WWAN1
- Backup Link: WWAN2
- Backup Mode: Cold Backup
- Revert Interval: 0
- Emergency Reboot: OFF

The 'Link Settings' section contains a table with the following data:

Index	Type	Description	Connection Type	
1	WWAN1		DHCP	
2	WWAN2		DHCP	
3	WAN		DHCP	
4	WLAN		DHCP	

Click the edit button of WWAN1 to set its parameters according to the current ISP.

The screenshot shows the 'Link Manager' interface with the 'General Settings' for WWAN1. The fields are:

- Index: 1
- Type: WWAN1
- Description: (empty)

**^ WWAN Settings**

When finished, click **Submit > Save & Apply** for the configuration to take effect.

## 4.1.2 SMS Remote Control

R3000 Quad supports remote control via SMS. You can use following commands to get the status of the router, and set all the parameters of the router. There are three authentication types for SMS control. You can select from “Password”, “Phonenum” or “Both”.

### An SMS command has the following structure:

1. Password mode—Username: Password;cmd1;cmd2;cmd3; ...cmdn (available for every phone number).
2. Phonenum mode--cmd1; cmd2; cmd3; ... cmdn (available when the SMS was sent from the phone number which had been added in router’s phone group).
3. Both mode-- Username: Password;cmd1;cmd2;cmd3; ...cmdn (available when the SMS was sent from the phone number which had been added in router’s phone group).

### SMS command Explanation:

1. User name and Password: Use the same username and password as WEB manager for authentication.
2. cmd1, cmd2, cmd3 to Cmdn, the command format is the same as the CLI command, more details about CLI cmd please refer to **Chapter 5 Introductions for CLI**.

**Note:** Download the configure XML file from the configured web browser. The format of SMS control command can refer to the data of the XML file.

Go to **System > Profile > Export Configuration File**, click **Generate** to generate the XML file and click **Export** to export the XML file.

Profile	Rollback
<b>^ Import Configuration File</b>	
Reset Other Settings to Default	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF ?
Ignore Invalid Settings	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF ?
XML Configuration File	<input type="button" value="Choose File"/> No file chosen <input type="button" value="Import"/>
<b>^ Export Configuration File</b>	
Ignore Disabled Features	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF ?
Add Detailed Information	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF ?
Encrypt Secret Data	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF ?
XML Configuration File	<input type="button" value="Generate"/>
<b>^ Default Configuration</b>	
Save Running Configuration as Default	<input type="button" value="Save"/> ?
Restore to Default Configuration	<input type="button" value="Restore"/>

**XML command:**

```
<lan >
<network max_entry_num="2" >
<id > 1</id >
<interface > lan0</interface >
<ip > 172.16.7.29</ip >
<netmask > 255.255.0.0</netmask >
<mtu > 1500</mtu >
```

**SMS cmd:**

```
set lan network 1 interface lan0
set lan network 1 ip 172.16.7.29
set lan network 1 netmask 255.255.0.0
set lan network 1 mtu 1500
```

- The semicolon character (;) is used to separate more than one commands packed in a single SMS.
- E.g.

**admin:admin;status system**

In this command, username is "admin", password is "admin", and the function of the command is to get the system status.

**SMS received:**

```
hardware_version = 1.0
firmware_version = "3.0.0"
kernel_version = 4.1.0
device_model = R3000 Quad
serial_number = 10201726051044
system_uptime = "0 days, 00:10:58"
system_time = "Sun May 28 11:46:34 2017"
```

**admin:admin;reboot**

In this command, username is “admin”, password is “admin”, and the command is to reboot the Router.

**SMS received:**

OK

**admin:admin;set firewall remote\_ssh\_access false;set firewall remote\_telnet\_access false**

In this command, username is “admin”, password is “admin”, and the command is to disable the remote\_ssh and remote\_telnet access.

**SMS received:**

OK

OK

**admin:admin; set lan network 1 interface lan0;set lan network 1 ip 172.16.99.11;set lan network 1 netmask 255.255.0.0;set lan network 1 mtu 1500**

In this command, username is “admin”, password is “admin”, and the commands is to configure the LAN parameter.

**SMS received:**

OK

OK

OK

OK

## 4.2 Network

### 4.2.1 IPsec VPN

The configuration of server and client is as follows.

## IPsec VPN\_Server:

### Cisco 2811:

```

Router>enable
Router#config
Configuring from terminal, memory, or network [terminal]?
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#crypto isakmp policy 10

## 4.2.2 OpenVPN

OpenVPN supports two modes, including Client and P2P. Here takes Client as an example.

### OpenVPN\_Server:

Generate relevant OpenVPN certificate on the server side firstly, and refer to the following commands to configuration the Server:

```
local 202.96.1.100
mode server
port 1194
proto udp
dev tun
tun-mtu 1500
fragment 1500
ca ca.crt
cert Server01.crt
key Server01.key
dh dh1024.pem
server 10.8.0.0 255.255.255.0
ifconfig-pool-persist ipp.txt
push "route 192.168.3.0 255.255.255.0"
client-config-dir ccd
route 192.168.1.0 255.255.255.0
keepalive 10 120
cipher BF-CBC
comp-lzo
max-clients 100
persist-key
persist-tun
status openvpn-status.log
verb 3
```

**Note:** For more configuration details, please contact your technical support engineer.

### OpenVPN\_Client:

Click **VPN > OpenVPN > OpenVPN** as below.

OpenVPN	Status	x509					
<b>^ Tunnel Settings</b>							
Index	Enable	Description	Mode	Protocol	Server Address	Interface Type	+

Click **+** to configure the Client01 as below.

**^ General Settings**

Index	<input type="text" value="1"/>
Enable	<input checked="" type="checkbox"/> ON <input type="checkbox"/> OFF
Description	<input type="text" value="Client01"/>

Expert Options	<input type="text" value="fragment 1500"/> ?

When finished, click **Submit > Save & Apply** for the configuration to take effect.

## 4.2.3 GRE VPN

The configuration of two points is as follows.

The window is displayed as below by clicking **VPN > GRE > GRE**.

GRE			
Status			
^ Tunnel Settings			
Index	Enable	Description	Remote IP Address
			+

### GRE-1:

Click **+** button and set the parameters of GRE-1 as below.

^ Tunnel Settings	
Index	<input type="text" value="1"/>
Enable	<input checked="" type="checkbox"/> ON <input type="checkbox"/> OFF
Description	<input type="text" value="GRE-1"/>
Remote IP Address	<input type="text" value="59.1.1.1"/>
Local Virtual IP Address	<input type="text" value="10.8.0.1"/>
Remote Virtual IP Address	<input type="text" value="10.8.0.2"/>
Enable Default Route	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF
Enable NAT	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF
Secrets	<input type="password" value="*****"/>

When finished, click **Submit > Save & Apply** for the configuration to take effect.

### GRE-2:

Click **+** button and set the parameters of GRE-1 as below.

The screenshot shows the 'Tunnel Settings' configuration page for GRE-2. The fields are as follows:

- Index: 1
- Enable: ON
- Description: GRE-2
- Remote IP Address: 58.1.1.1
- Local Virtual IP Address: 10.8.0.2
- Remote Virtual IP Address: 10.8.0.1
- Enable Default Route: OFF
- Enable NAT: OFF
- Secrets: \*\*\*\*\*

When finished, click **Submit > Save & Apply** for the configuration to take effect.

The comparison between GRE-1 and GRE-2 is as below.

The comparison shows two side-by-side screenshots of the 'Tunnel Settings' page. The left side is for GRE-1 and the right side is for GRE-2. Red boxes and text annotations highlight the differences:

- GRE-1:** Remote IP Address: 59.1.1.1 (GRE-1 public IP), Local Virtual IP Address: 10.8.0.1 (GRE-1 tunnel IP), Remote Virtual IP Address: 10.8.0.2 (GRE-2 tunnel IP).
- GRE-2:** Remote IP Address: 58.1.1.1 (GRE-2 public IP), Local Virtual IP Address: 10.8.0.2 (GRE-2 tunnel IP), Remote Virtual IP Address: 10.8.0.1 (GRE-1 tunnel IP).
- Secrets:** Both are set to \*\*\*\*\*. A note says 'set the same secret as GRE-2' for GRE-1 and 'set the same secret as GRE-1' for GRE-2.

## Chapter 5 Introductions for CLI

### 5.1 What Is CLI

Command-line interface (CLI) is a software interface providing another way to set the parameters of equipment from the SSH or through a telnet network connection.

#### Route login:

Router login: admin

Password: admin

#

#### CLI commands:

# ? (**Note:** the '?' won't display on the page.)

!	Comments
add	Add a list entry of configuration
clear	Clear statistics
config	Configuration operation
debug	Output debug information to the console
del	Delete a list entry of configuration
exit	Exit from the CLI
help	Display an overview of the CLI syntax
ping	Send messages to network hosts
reboot	Halt and perform a cold restart
route	Static route modify dynamically, this setting will not be saved
set	Set system configuration
show	Show system configuration
status	Show running system information
tftpupdate	Update firmware using tftp
tracert	Print the route packets trace to network host
urlupdate	Update firmware using http or ftp
ver	Show version of firmware

## 5.2 How to Configure the CLI

Following is a table about the description of help and the error should be encountered in the configuring program.

Commands /tips	Description
?	Typing a question mark “?” will show you the help information.
Ctrl+c	Press these two keys at the same time, except its “copy” function but also can be used for “break” out of the setting program.
Syntax error: The command is not completed	Command is not completed.
Tick space key+ Tab key	It can help you finish you command. Example: # config (tick enter key) Syntax error: The command is not completed # config (tick space key+ Tab key) commit                    save_and_apply    loaddefault
# config save_and_apply / #config commit	When your setting finished, you should enter those commands to make your setting take effect on the device. <b>Note:</b> Commit and save_and_apply plays the same role.

### Quick Start with Configuration Examples

The best and quickest way to master CLI is firstly to view all features from the webpage and then read all CLI commands at a time, finally learn to configure it with some reference examples.

#### Example 1: Show current version

```
# status system
hardware_version = 1.0
firmware_version = "3.0.0"
kernel_version = 4.1.0
device_model = R3000 Quad
serial_number = 10201726051044
system_uptime = "0 days, 00:10:58"
system_time = "Sun May 28 11:46:34 2017"
```

#### Example 2: Update firmware via tftp

```
# tftpupdate (space+?)
  firmware    New firmware
# tftpupdate firmware (space+?)
  String    Firmware name
# tftpupdate firmware R3000 Quad-firmware-sysupgrade-unknown.bin host 192.168.100.99 //enter a new firmware name
Downloading
```

R3000 Quad-firmware-s 100% |\*\*\*\*\*| 5018k 0:00:00 ETA

Flashing

Checking 100%

Decrypting 100%

Flashing 100%

Verifying 100%

Verify Success

upgrade success

//update success

# config save\_and\_apply

OK

// save and apply current configuration, make you configuration effect

### Example 3: Set link-manager

# set

# set

at_over_telnet	AT Over Telnet
cellular	Cellular
ddns	Dynamic DNS
ethernet	Ethernet
event	Event Management
firewall	Firewall
gre	GRE
ipsec	IPsec
lan	Local Area Network
link_manager	Link Manager
ntp	NTP
openvpn	OpenVPN
reboot	Automatic Reboot
RobustLink	RobustLink
route	Route
sms	SMS
snmp	SNMP agent
ssh	SSH
syslog	Syslog
system	System
user_management	User Management
vrrp	VRRP
web_server	Web Server

# set link\_manager

primary_link	Primary Link
backup_link	Backup Link
backup_mode	Backup Mode
emergency_reboot	Emergency Reboot
link	Link Settings

# set link\_manager primary\_link (space+?)

```

Enum Primary Link (wwan1/wwan2/wan)
# set link_manager primary_link wwan1 //select "wwan1" as primary_link
OK //setting succeed
# set link_manager link 1
  type          Type
  desc          Description
  connection_type Connection Type
  wwan          WWAN Settings
  static_addr   Static Address Settings
  pppoe         PPPoE Settings
  ping         Ping Settings
  mtu          MTU
  dns1_overridden Overridden Primary DNS
  dns2_overridden Overridden Secondary DNS
# set link_manager link 1 type wwan1
OK
# set link_manager link 1 wwan
  auto_apn          Automatic APN Selection
  apn              APN
  username         Username
  password         Password
  dialup_number    Dialup Number
  auth_type        Authentication Type
  aggressive_reset Aggressive Reset
  switch_by_data_allowance Switch SIM By Data Allowance
  data_allowance   Data Allowance
  billing_day      Billing Day
# set link_manager link 1 wwan switch_by_data_allowance true
OK
#
# set link_manager link 1 wwan data_allowance 100 //open cellular switch_by_data_traffic
OK //setting succeed
# set link_manager link 1 wwan billing_day 1 //setting specifies the day of month for billing
OK // setting succeed
...
# config save_and_apply
OK // save and apply current configuration, make you configuration effect

```

#### Example 4: Set LAN IP address

```

# show lan all
network {
  id = 1
  interface = lan0
  ip = 192.168.0.1

```

```
netmask = 255.255.255.0
mtu = 1500
dhcp {
    enable = true
    mode = server
    relay_server = ""
    pool_start = 192.168.0.2
    pool_end = 192.168.0.100
    netmask = 255.255.255.0
    gateway = ""
    primary_dns = ""
    secondary_dns = ""
    wins_server = ""
    lease_time = 120
    expert_options = ""
    debug_enable = false
}
}
multi_ip {
    id = 1
    interface = lan0
    ip = 172.16.7.29
    netmask = 255.255.0.0
}
#
# set lan
network      Network Settings
multi_ip     Multiple IP Address Settings
vlan         VLAN
# set lan network 1(space+?)
interface    Interface
ip           IP Address
netmask      Netmask
mtu          MTU
dhcp         DHCP Settings
# set lan network 1 interface lan0
OK
# set lan network 1 ip 172.16.99.22           //set IP address for lan
OK                                           //setting succeed
# set lan network 1 netmask 255.255.0.0
OK
#
...
# config save_and_apply
OK                                           // save and apply current configuration, make you configuration effect
```

## Example 5: CLI for setting Cellular

```
# show cellular all
sim {
    id = 1
    card = sim1
    phone_number = ""
    extra_at_cmd = ""
    network_type = auto
    band_select_type = all
    band_gsm_850 = false
    band_gsm_900 = false
    band_gsm_1800 = false
    band_gsm_1900 = false
    band_wcdma_850 = false
    band_wcdma_900 = false
    band_wcdma_1900 = false
    band_wcdma_2100 = false
    band_lte_800 = false
    band_lte_850 = false
    band_lte_900 = false
    band_lte_1800 = false
    band_lte_1900 = false
    band_lte_2100 = false
    band_lte_2600 = false
    band_lte_1700 = false
    band_lte_700 = false
    band_tdd_lte_2600 = false
    band_tdd_lte_1900 = false
    band_tdd_lte_2300 = false
    band_tdd_lte_2500 = false
}
sim {
    id = 2
    card = sim2
    phone_number = ""
    extra_at_cmd = ""
    network_type = auto
    band_select_type = all
    band_gsm_850 = false
    band_gsm_900 = false
    band_gsm_1800 = false
    band_gsm_1900 = false
    band_wcdma_850 = false
    band_wcdma_900 = false
```

```

band_wcdma_1900 = false
band_wcdma_2100 = false
band_lte_800 = false
band_lte_850 = false
band_lte_900 = false
band_lte_1800 = false
band_lte_1900 = false
band_lte_2100 = false
band_lte_2600 = false
band_lte_1700 = false
band_lte_700 = false
band_tdd_lte_2600 = false
band_tdd_lte_1900 = false
band_tdd_lte_2300 = false
band_tdd_lte_2500 = false
}
# set(space+?)
at_over_telnet    cellular    ddns        dhcp        dns
event            firewall   ipsec       lan         link_manager
ntp              openvpn   reboot     route      serial_port
sms              snmp      syslog     system     user_management
vrrp

# set cellular(space+?)
  sim    SIM Settings
# set cellular sim(space+?)
  Integer  Index (1..2)

# set cellular sim 1(space+?)
  card                SIM Card
  phone_number        Phone Number
  extra_at_cmd        Extra AT Cmd
  network_type        Network Type
  band_select_type    Band Select Type
  band_gsm_850        GSM 850
  band_gsm_900        GSM 900
  band_gsm_1800       GSM 1800
  band_gsm_1900       GSM 1900
  band_wcdma_850      WCDMA 850
  band_wcdma_900      WCDMA 900
  band_wcdma_1900     WCDMA 1900
  band_wcdma_2100     WCDMA 2100
  band_lte_800        LTE 800 (band 20)
  band_lte_850        LTE 850 (band 5)
  band_lte_900        LTE 900 (band 8)
  band_lte_1800       LTE 1800 (band 3)

```

```

band_lte_1900      LTE 1900 (band 2)
band_lte_2100      LTE 2100 (band 1)
band_lte_2600      LTE 2600 (band 7)
band_lte_1700      LTE 1700 (band 4)
band_lte_700       LTE 700 (band 17)
band_tdd_lte_2600  TDD LTE 2600 (band 38)
band_tdd_lte_1900  TDD LTE 1900 (band 39)
band_tdd_lte_2300  TDD LTE 2300 (band 40)
band_tdd_lte_2500  TDD LTE 2500 (band 41)
# set cellular sim 1 phone_number 18620435279
OK
...
# config save_and_apply
OK                                     // save and apply current configuration, make you configuration effect

```

### 5.3 Commands Reference

Commands	Syntax	Description
Debug	Debug <i>parameters</i>	Turn on or turn off debug function
Show	Show <i>parameters</i>	Show current configuration of each function , if we need to see all please using “show running ”
Set	Set <i>parameters</i>	All the function parameters are set by commands set and add, the difference is that set is for the single parameter and add is for the list parameter
Add	Add <i>parameters</i>	

**Note:** Download the config.XML file from the configured web browser. The command format can refer to the config.XML file format.

# Glossary

Abbr.	Description
AC	Alternating Current
APN	Access Point Name
ASCII	American Standard Code for Information Interchange
CE	Conformité Européene (European Conformity)
CHAP	Challenge Handshake Authentication Protocol
CLI	Command Line Interface for batch scripting
CSD	Circuit Switched Data
CTS	Clear to Send
dB	Decibel
dBi	Decibel Relative to an Isotropic radiator
DC	Direct Current
DCD	Data Carrier Detect
DCE	Data Communication Equipment (typically modems)
DCS 1800	Digital Cellular System, also referred to as PCN
DI	Digital Input
DO	Digital Output
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi-frequency
DTR	Data Terminal Ready
EDGE	Enhanced Data rates for Global Evolution of GSM and IS-136
EMC	Electromagnetic Compatibility
EMI	Electro-Magnetic Interference
ESD	Electrostatic Discharges
ETSI	European Telecommunications Standards Institute
EVDO	Evolution-Data Optimized
FDD LTE	Frequency Division Duplexing Long Term Evolution
GND	Ground
GPRS	General Packet Radio Service
GRE	generic route encapsulation
GSM	Global System for Mobile Communications
HSPA	High Speed Packet Access
ID	identification data
IMEI	International Mobile Equipment Identity
IP	Internet Protocol
IPsec	Internet Protocol Security
kbps	kbits per second
L2TP	Layer 2 Tunneling Protocol

<b>Abbr.</b>	<b>Description</b>
LAN	local area network
LED	Light Emitting Diode
M2M	Machine to Machine
MAX	Maximum
Min	Minimum
MO	Mobile Originated
MS	Mobile Station
MT	Mobile Terminated
OpenVPN	Open Virtual Private Network
PAP	Password Authentication Protocol
PC	Personal Computer
PCN	Personal Communications Network, also referred to as DCS 1800
PCS	Personal Communication System, also referred to as GSM 1900
PDU	Protocol Data Unit
PIN	Personal Identity Number
PLCs	Program Logic Control System
PPP	Point-to-point Protocol
PPTP	Point to Point Tunneling Protocol
PSU	Power Supply Unit
PUK	Personal Unblocking Key
R&TTE	Radio and Telecommunication Terminal Equipment
RF	Radio Frequency
RTC	Real Time Clock
RTS	Request to Send
RTU	Remote Terminal Unit
Rx	Receive Direction
SDK	Software Development Kit
SIM	subscriber identification module
SMA antenna	Stubby antenna or Magnet antenna
SMS	Short Message Service
SNMP	Simple Network Management Protocol
TCP/IP	Transmission Control Protocol / Internet Protocol
TE	Terminal Equipment, also referred to as DTE
Tx	Transmit Direction
UART	Universal Asynchronous Receiver-transmitter
UMTS	Universal Mobile Telecommunications System
USB	Universal Serial Bus
USSD	Unstructured Supplementary Service Data
VDC	Volts Direct current
VLAN	Virtual Local Area Network
VPN	Virtual Private Network

---

<b>Abbr.</b>	<b>Description</b>
VSWR	Voltage Stationary Wave Ratio
WAN	Wide Area Network
