

Product Information:

Philosophy/Design

Shift paddles noticeably increase the vehicle comfort. In addition, they also ensure greater safety on the road. Thanks to the shift paddles, drivers can now keep their hands on the steering wheel when shifting gears; their eyes remain on the road.

The AC Schnitzer paddle sets are larger than their standard counterparts, which results in even safer operation and even better ergonomics. This makes them a good investment in your own safety and that of other road users.

The AC Schnitzer paddle sets are lasered from 2 mm thick aluminium. They are manufactured with high precision by CNC-controlled finishing. The black anodizing in combination with the red accents, which are applied using the screen printing process, creates a very sporty appearance, which is naturally colourfast and abrasion-resistant. The haptics of the aluminium AC Schnitzer paddle shifters are significantly improved in comparison to the standard parts, which are made of plastics. The AC Schnitzer shift paddle sets are delivered in a high-quality gift box.

Installation is simple, as the standard paddles only need to be replaced. The AC Schnitzer paddle shift sets are free of registration.

Scope of delivery

- shifting paddle left
- shifting paddle right
- mounting instruction
- developed exclusively for BMW vehicles
- free of registration
- red AC Schnitzer logo
- lasered from 2 mm aluminium
