

Product Information:

Philosophy/Design

Modern, timeless design paired with precise workmanship: The matt-anodized AC Schnitzer aluminium pedal sets for manual and automatic vehicles are milled from high-quality aluminium and give the interior an exclusive, sporty character. The replaceable rubber inserts, made of thermoplastic elastomer (TPE), give the driver a secure grip, even in wet conditions. The AC Schnitzer aluminium pedals are delivered in a high-quality gift box and they suit with many other AC Schnitzer aluminium interior components.

Material/Assembly

The AC Schnitzer aluminium pedal sets are made of a 4 mm thick wrought aluminium alloy (AlMgSi) and are matt-anodized after milling. They are bolted to the standard vehicle pedals. They completely cover the standard pedal set.

The form-bonded, slip-resistant rubber inserts made of thermoplastic elastomer TPE are inserted into the aluminium pedals and fixed by means of the screw connection with the standard pedals.

Scope of delivery

- 2-piece set, consisting of: anodized aluminium pads with non-slip rubber inserts for the accelerator and brake pedals
- German ABE / general operating permit
- quality tag
- gift box

Uniqueness of the AC Schnitzer aluminium pedals

- milled aluminium: the highlight of the foot space
- sporty-dynamic look
- free of registration by German ABE (general operating permit)
- quick and easy installation
- nonskid
- milled AC Schnitzer logo on visible side
- exchangeable rubber inserts
- matt anodized
