

Dreve

# EyeVolution<sup>®</sup>

Let there be light

Light polymerisation unit especially developed for the most effective deep polymerisation of all commercially available base materials like build-up resins for thermoformed splints, individual tray material, sealing lacquers and blockout resins. The long-life LEDs avoid thermal strain on the materials and reach exactly the wavelength ranges that are needed for the resins' photo-initiation.

## Technical data

<b>Dimensions (H x W x D)</b>	205 x 205 x 255 mm
<b>Weight</b>	1.5 kg
<b>Polymerisation peak</b>	385–390 (UV-light) and 465–470 nm (blue light)
<b>Power input</b>	max. 18 W
<b>Voltage</b>	100–240 V / 50–60 Hz, 0.7 A
<b>Time intervals (minutes)</b>	1 / 2 / 3 / 5 / 10

**D38100** EyeEvolution®
