

Ceramic Firing Support

SmilePeg is a moldable paste that stabilizes crowns, veneers and delicate restorations during firing. It can easily be removed and reused for up to three firing cycles.

Precise firing fixation

Keeps crowns, veneers and small pieces exactly in position throughout the firing process.

Moldable custom support

Shapes into personalized supports or pins for restorations that are hard to stabilize.

No ceramic contamination

Removes easily after firing without contaminating or damaging the ceramic surface.

Excellent dimensional stability

Its exceptionally low volume change ensures stable support throughout the entire firing cycle.

Reusable for multiple firings

Retains its structure after three firings and does not turn into powder, unlike conventional materials.
