DITEC Ultra Tyre Shine is a quick coating for detailing of tyres, plastic and rubber trims. The multi silicon based formula gives a superb satin low-tack finish.

Well suited for high end detailig for both professional and consumer use.

Ditec Centers an Certified Installers

To be used in connection with completion of Ditec Paint Preservation. See Ditec Manual for more details.

Benefits

Extremely economic, detail up to 80 tyres from one 225 gram container.

Quick and easy to use.

Complete with applicator sponge to avoid messy fling on wheels and paintwork.

Long lasting finish.

Instructions for use

For best result, ensure that tyrewalls are clean and completely dry. Remove tab-seal from the container. Pick up a small amount of cremé onto the applicator pad. Apply by spotting the the tyre in a series of dots. Then simply join the dots, working the dressing around in circular motion to create an even and uniform finish. Re-apply if extra gloss is required.

Remove any excess product from tyre tread before the vehicle is driven.
