

NatureSoil by Oliver Knott

„The perfect aquarium ground for tropical plants and fishes“

Naturesoil is an unique soil conceived by Oliver Knott, world champion in aquascaping contest 2004 and 2005.

Thank to its characteristics, Naturesoil can be defined as the perfect soil to grow aquarium plants, promoting also the health of fishes and invertebrates.

Structurally very stable, Naturesoil is able to absorb the excess of hardness in the water, even in very hard water, which thanks to Naturesoil attains the right parameters in few hours. Naturesoil can do this for more than 1 year (till 2 year sometimes, depending from the hardness of the water), helping to reduce work and expense for a tank.

CLEAN
Keep water clean

CRUSH
Used for long time

It strongly sorbs impurities and keeps high clarity aquarium water. Pellets are not too soft and not easily crumbled. It can be used for a long time.

Used for shrimps

Used for water plants

Used for fishes

Not only water plants, NatureSoil can be used for all living subjects such as fish, shrimps and etc., that prefers slightly acidic soft water environment.

Optimum grow

It's special granulated shape supplies full oxygen water to the roots of water plants. This it is good for aquariums with thick water plants (Cryptocoryne, Echinodorus).

pH CONTROL
Stable pH level

GH
Lower water hardness

It keeps the water pH slightly acidic and lower the total hardness. It prepares slightly acidic soft water environment that many fresh water tropical fish prefer.

High biology soil

It accelerates propagation of filtrate bacteria and so the aquariums become in good condition with in a short period. If there is not any water plant in the aquarium, NatureSoil can be used as bottom filter or filter material.

Safe your water consumption

Use the old water from your aquarium to watering your house and garden plants. The water is optimal for this purpose and you save our environment.
