- (13) 13.1 Subject and Type
Anchor device type A
Type: STA

13.2 Description

The anchor device of STA (Fig. 1 to 7) is used to simultaneously protect a maximum of four people against falls from a height. The anchor device consists of a base plate and a support pipe which is welded to the base plate. At the upper end of the support an anchor eyelet is securely screw-fastened by means of a hexagonal screw and a counter nut (M 16). The user can use his personal protective equipment to secure himself against falls from a height by means of this eyelet.

Using the respective fastening elements, the anchor device of type STA is fastened directly to the structure to suitable surface of sufficient strength. The device is made of galvanised steel and is intended for mounting to roofs, walls and ceilings. Therefore, load to the device can be exerted from all directions. Alternatively, the anchor device can be made of stainless steel. This applies to the variants STA-10-A4, STA-12-A4 and STA-16-A4.

Moreover, the product labelled as type STA is used a component of the rope system type INNOTECH ALLinONE and as a component of the rail system type INNOTECH TAURUS.
