## WARNING & PRECAUTION

To avoid risk of serious injury or possible violation of laws, please read the following thoroughly before installation or connecting.

This symbol means important ban. Failure to heed them can result in serious injury or death.

This symbol mean important instructions. Failure to heed them can result in injury or material property damage.

Having the wiring and installation done by expert.  
The wiring and installation of this unit requires special technical skill and experience. To ensure the safety, always connect the dealer where you purchased this product to have the work done.

Do not watch video or operate the unit while driving.

Be sure to use specified accessory parts and install them securely.

Do not install in location which may hide vehicle operation, such as steering wheel or gearshift or cover of airbag .

Be sure to check the installation of antenna regular. Antenna dropping may result in an accident while the vehicle is running.

Do not touch antenna or any plugs while in thunder storm to avoid electric shock.

Be sure to disconnect the cable from the negative battery terminal while installation.

Do not damage wiring. Failure to do so may result in electric shock or fire due to electrical shorts.

Be sure to use the correct ampere rating when replace fuses. Failure to do so may result in fire of electric shorts.

## FEATURES

---

- 2-Din receiver with capacitive panel
- 7-inch 1024 x 600 HD display
- Support iOS phone mirrorlink
- Support android phone mirrorlink
- Built-in professional DSP
- Support Virtual bass
- Support time alignment
- Built-in 14 band EQ, Preset 8 sound effects
- Support lossless music
- Support 1080P video playback
- Support MP3/WMA/AAC/FLAC audio playback
- Support H264/WMV/DIVX/FLV video playback
- Built-in Bluetooth
- Support Bluetooth music playback
- Built-in multi-color lights
- Support subwoofer output
- Support subwoofer volume control
- 2 Video output
- 2 Audio output
- 4V Pre-output
- 3V Subwoofer output
- 1 Video input, 2 Audio input
- Built-in PAC jack
- Maximum power: 4x50W
- Support external microphone
- High sensitivity FM/AM, support RDS
- Support steering wheel button learning

# RADIO OPERATION

## Radio Interface

- ◀ Backward
- ▶ Forward
- 📶 Band selection
- 🔍 Automatic search
- 🔊 Stereo switch
- 📡 DX/LOC switch
- ⌨️ Frequency input
- ⚙️ DSP setting

## Radio Area Selection

1. Press [□] to enter the homepage.
2. Click [⚙️] to enter setting interface.
3. Click [⚙️] to select [Radio Area].
4. Select the corresponding radio area.

## Automatic Search

Press and hold the [Q] for more than 2 seconds, the radio stations that have been searched will be automatically saved the number list below.

## Rds Function

1. Press [□] to enter the homepage.
2. Click [⚙️] to enter setting interface.
3. Click [⚙️] to select [RDS] open.

# BLUETOOTH OPERATION

## Bluetooth Pairing

The first time pair mobile phone with AV receiver, please follow below steps:

1. Press [□] to enter the homepage.
2. Click [BT] to enter the Bluetooth interface.
3. Click [⚙️] to enter the Bluetooth pairing.
4. Turn on the phone's Bluetooth to search:  
Bluetooth device: NAM1630.

# PHONE MIRROR LINK OPERATION

Remarks:

1. Before the mirrorlink operation, the Bluetooth must be paired and connected. When the Bluetooth is not connected, there will be no sound.
2. Only the front USB supports mirrorlink.
3. Press [□] to enter the homepage.
4. Click [Autolink] to enter the phone mirrorlink interface.

## Mirrorlink Interface

## Adroid phone Mirrorlink

1. Scan QR code to download the Autolink APP (First connection).
2. Please connect the phone to the headunit via USB cable.
3. Please click trust on your phone.

## Ios Phone Mirrorlink

1. Please connect the phone to the head-unit via USB cable.
2. Please click trust on your phone.

Remark:

Some mobile phones need to turn on the USB debugging mode.

## DSP SETTING

---

1. Press [  ] to enter the homepage.
2. Click [ DSP ] to enter the DSP professional setting interface.

-  :Delay Settings
-  :EQ and Sound effect settings
-  :Bass EQ
-  :Focus Adjustment
-  :DSP Professional Settings
-  :DSP Reset

### DSP professional instruction:

1. Click [ CH1~CH8 ] to switch the corresponding channel. There are 8 channels in total.
2. Click [ << ] to display " CH1~CH4 " channel click [ >> ] to display " CH5~CH8 " channel.
3. In the professional setting interface, can set 5.1 channel, two frequency division, three frequency division, connection and phase of the opposite phase Settings.
4. Click [ LINK ] to connect two adjacent channels.
5. Click [ 180° ] to select positive or inverse phase Settings.
6. For each channel, can set the filter type of high-pass and low-pass slope, can adjust the frequency and volume as required.
7. Select link\_ril,essel, butt\_W filter type, click [ < ] or [ > ] can switch.
8. The adjustable frequency range is 0~20600Hz, click [ < ] or [ > ] it can be adjusted up or down.
9. Slope can choose: 6 db, 12 db, 18 db, db, 30 db, db, 42 db, 48 db and OFF, click [ < ] or [ > ] can toggle selection.
10. Click [ Mute ] to turn on the Mute mode, and click again to turn off the Mute mode, click on the [ < ] or [ > ] can adjust the volume, or slide the volume display lever left and right to adjust the volume. The adjustable volume ranges from 0 ~ 60.

## DSP SETTING

**Note:** When 5.1 channels, 2 frequencies, or 3 are selected on the of DSP output frequency division, please install speaker according to the corresponding location of speaker distribution, and note that the audio output of RCA line defines socket docking (for the definition of RCA line , please refer to "AUDIO OUTPUT: Extension" of line connection in the manual).

### 5.1 Channel

### 2-Way

### 3-Way

**Example:** On the interface of DSP output frequency division, select the three-frequency division, and press to install the speaker according to the distribution map of three-frequency division, and set the position of each speaker . The output audio is different. When connecting the RCA line interface, note meaning see the label content of the 16-pin RCA line interface 3-way to define the output. Verify that the loudspeaker output is consistent with the RCA interface definition before interconnecting with the loudspeaker.

### Position Settings

Click [  ] to enter the auto delay settings interface.

Click the seat icon on the right to set the corresponding horn position.

### Delay Settings

Click [ Manual ] to enter the manual delay settings interface.

Click [-] or [+] corresponding to the horn to set the corresponding horn delay time.

**Delay range:**

Ms range: 0.00~20.00, Cm range: 0~692.

**Unit switch:**

Click [MS] to switch milliseconds.

Click [CM] to switch CM units.

### Delay Horn Diagram

**Note:** First confirm that the EQ is the standard mode, the listening position, output volume, and output crossover are the factory defaults. Balance adjustment of the left and right channels to output separately, and confirm the consistency of the tweeter and midrange speakers. The left and right channels must be consistent, otherwise the delay it was chaotic.

#### Measure the distance of each speaker:

1. Determine the value of the listening bit, If you specify the distance from the center of the currently set listening position to each speaker, the delay time is calculated and set automatically.
2. Determines the center of the currently set listening position as the reference point.
3. Measure the distance from the reference point to the horn.
4. Calculate the distance difference between the farthest speaker and the others.
5. Set the DTA value for each speaker step by step.
6. Adjust the gain of a single speaker.

### EQ And Sound Effect Settings

Click [  ] to enter EQ and sound Settings screen.

EQ equalizer can choose user1, user2, flat, bass, jazz, pop, classic, rock 8 sound modes.

#### Note:

1. Choose flat, bass, jazz, pop, classic, rock sound, will not be able to change the corresponding frequency, gain and Q value.
2. Select user 1 or user 2 to adjust the frequency, gain, and Q values.

#### EQ operation instructions:

1. Click [ CH1~CH8 ] to switch the corresponding channel, There are 8 channels in total.
2. EQ curve adjustment of corresponding output channel (Band, Freq, Gain and Q values) .
3. BAND: This machine has a total of 14 bands, the numbers [ 1-14 ] each represent a band, click [ << ] in this interface to display "1-7" band, click [ >> ] to display "8-14" band.
4. Freq: Select the frequency of the corresponding band of the output channel, and then click [ + ] or [ - ] to increase or decrease the selected frequency. Adjustable frequency range: 0~20600Hz.
5. Gain: Select the gain of the corresponding band of the output channel, and then point [ + ] or [ - ] to increase or decrease the gain value. The gain value can be adjusted from -20.0 ~ 20.0.
6. Q value: Select the Q value of the corresponding band of the output channel, and click [ + ] or [ - ] to increase or decrease the Q value. Q value range: 0.404 ~ 28.852 .

## DSP SETTING

---

### Focus Adjustment

Click [  ] to enter the audio and video setting interface.

Click [ NUS OFF ] to turn NUS on or OFF.

In this interface can adjust the main channel sound image, central sound image, surround sound image.

The adjustment range is 0~16, click [ - ] or [ + ] to adjust.

### Bass EQ Settings

Click [  ] to enter the bass EQ setting interface.

Select the speaker you want to adjust and click the [  ] icon corresponding to the speaker to adjust the frequency and sound level of the speaker.

Bass EQ frequencies can choose: 40Hz, 60Hz, 100Hz, 150Hz, 200Hz, 250Hz, 300Hz, 400Hz.

The value of bass EQ level ranges from -10~10. Click [-] or [+] to adjust, or slide the display bar left and right to adjust.

## PC SOFTWARE OPERATION INTRODUCTION

---

(PC can be downloaded from the official website([Http://www.nakamichicaraudio.com](http://www.nakamichicaraudio.com),Downloads)

Computer Configuration Requirements:  
Screen resolution higher than 1280x768,  
otherwise the software UI is incomplete,  
only suitable for windows operation system  
laptop, desktop and pads.

## Main Menu Edit Section

Main features:

Save, Memory, Option, Mixer, Audio, NUS, SeakerNull and unconnected operations.

1. Click "Save" to save the currently set frequency parameters
2. Click on the "Memory" popup window and select Load machine Preset Scene or Save as Preset Scene or Load PC Presets File or Save PC Presets File or Load Machine Scene and Save Machine Scene.

Load PC Presets File  
Save PC Presets File

3. Click "Option" to select Chinese and English switch, noise door, about and restore factory Settings.

4. Click "Mixer" to enter the mixing interface, where the corresponding mixing input source can be entered by switching. The high level interface is as follows.

5. Click on the "Audio" window to select flat, bass, classical, jazz, pop and rock sounds.

6. Click the "NUS" pop-up window to open/close NUS SW and CEN SW; Adjustable main channel, middle channel, surround channel.

7. Click the "speakerNull" pop-up window, you can select two frequency, three frequency, 5.1 channel.

8. Click the "Unconnected" button to connect to the PC.

## Channel Equalizer Editing Area

Channel equalizer editor area Main function configuration:

Current output channel equalization design, 14 frequency band equalization adjustable frequency, Q value (response bandwidth), gain (increase or decrease the frequency response amplitude near the frequency point).

## Channel Divider Editing Area

Main function Settings of channel distributor editing area: setting of channel high and low pass filter.

Tunable filter type, frequency point and Q value (gradient or slope).

When the slope is 6dB/Oct, the type is butter-w.

1. "GEQ" button: Click to select graphic equalization or parametric equalization.
2. "Reset EQ" button: It is used to restore the parameters of the 14-band equalizer to the original pass-through mode (the frequency of the equalizer, the value and the gain are restored to the initial value).

3. "Restore EQ" button: Switch between the currently designed equalizer state parameters and the pass-through mode (the gain of all equalization points is restored to 0dB, the frequency and value are unchanged).

## Output Channel Adjustment Area

Output channel adjustment region, positive and negative phase of each channel. volume adjustment, mute, joint adjustment, etc.

1. Main volume adjust zone

Click the speaker button to mute the main volume.

Adjustment Range: ON/OFF, -59dB~6dB.

2. Sound adjustment: slid the scroll up and down to adjust the sound level of the channel, or input the value or scroll the mouse wheel in the sound input box to adjust the sound size. Click the horn button to switch between mute.

3. Positive phase adjustment: Click [ 0° ] or [ 180° ] to switch between positive phase and reverse phase.

4. Delay: set the delay value by scrolling the mouse wheel in the delay input box, or enter the value to set the delay value.

5. Reset output configuration: Customizable for channel type.

6. Lock output type: Locking for the current output channel type is not customizable.

7. Out left and right joint adjustment: The joint of the left and right channel data of the output channel can be copied from left right, or from right to left.

8. "Delay Unit" button: Select the delay unit by clicking the left or right arrow, available in milliseconds, centimeters, and inches.

## SETTINGS

---

1. Press [□] to enter the homepage.
2. Click [⚙️] to enter setting interface.

### Key Lights Settings

### Time Setting

## Display Settings

---

1. Press [□] to enter the homepage.
2. Click [⚙️] to enter the display setting interface.

## Steering Wheel Learning

---

1. Click [SWC] to enter the steering wheel learning interface.
2. Click [SWI], Display [SWC].
3. Click [⚙️] Start Settings.
4. Press and hold the steering wheel control button for 3s.
5. Click the button function on the screen. The learning success button turns gray.
6. Click [⚙️] to enter the save.

## TROUBLE SHOOTING

FAULT	REASON	SOLUTION
Unable to boot	Power supply fuse burned out	Replacement of the same type of fuse
	Other factors cause microprocessors to work abnormally	Reboot the unit using the reset button. Press the reset button with a pointed object.
When the ignition switch is turned off, all the information of setting is lost.	Replacement of batteries or fuses	Reset the information and restore it after replacing the fuse or batteries
The radio is ineffective	Weak radio signal	Try again in a different location
No image	Other factors cause microprocessors to work abnormally	Reboot the unit using the reset button. Press the reset button with a pointed object
Silent output	Small voice	Increase the volume
	Output line incorrectly connected	Check Output Line Connection

Do not connect the speaker leads of the power cord to the car battery; otherwise, the unit will be seriously damaged.

BEFORE connecting the speaker leads of the power cord to the speakers, check the speaker wiring in your car.

# SPECIFICATION
