

## HOW TO BUILD & MOUNT EXTENSION FOR PAX

1. Cut the panel's sides and back in wished size.
2. join the sides with the top and repeat the procedure for the bottom piece (the same way without the extra panel).  
Use the same mounting instructions on both units (See image).
3. Place the new part on top of the existing Pax.  
Fixate from above with screws no longer than 30 mm.
4. Use potential waste material to create a top if needed.
