

1. Safety Equipment

- Nitrile or butyl rubber chemical gloves
- Safety goggles or face shield
- Full-cover clothing
- Hearing protection if needed

2. High-Pressure Equipment

- With adjustable pressure and temperature suitable for the surface and graffiti.

3. Graffiti Remover

- Choose the correct remover that is compatible with the surface and graffiti type.
- We recommend testing a small area when working with a new type of surface or graffiti remover.

4. Area Preparation

- Protect surrounding areas (e.g., windows and plants).
- Cordone off the area if cleaning is to be carried out in a public space.

5. Application

- Apply the chosen remover with a brush or roller.
- Allow it to work according to the instructions.
- Check if manual processing is needed.
- Wash away the dissolved graffiti with appropriate pressure and temperature.

6. Post-Treatment

- Inspect the surface to ensure all graffiti has been removed.
- Check for any remaining shadows of graffiti. If so, find a suitable shadow remover and follow its instructions.
- Apply graffiti protection if appropriate to prevent future graffiti damage.
