

## Aquatain AMF® Anti-Mosquito Film 250ml

A brand new and environmentally friendly way to control mosquitoes and gnats with Aquatain AMF® Liquid Anti-Mosquito Film.

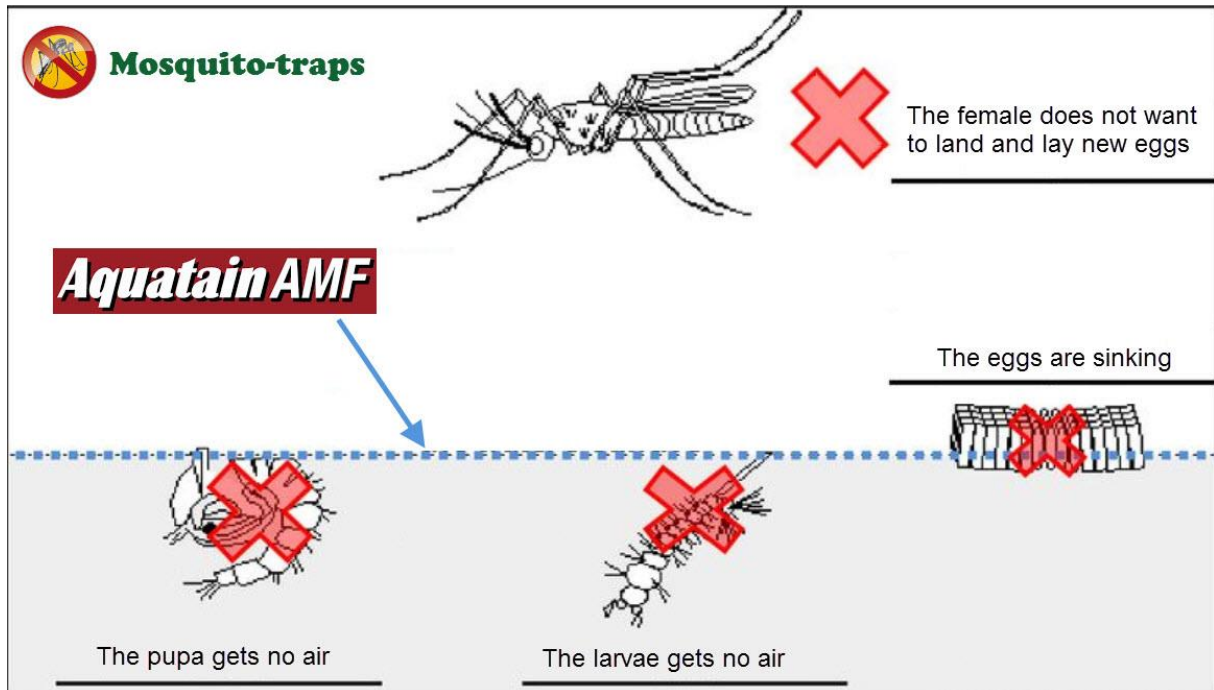

## Aquatain AMF® Anti-Mosquito Film 250ml

A brand new and environmentally friendly way to control mosquitoes and gnats.

### Aquatain AMF® prevents mosquito reproduction

Aquatain AMF® is a silicone-based liquid that forms a thin film on still water. It works in several ways, partly because the liquid, silicone-based membrane prevents mosquito larvae and mosquito pupae from getting through the water surface to reach air. The eggs die, and the membrane prevents the female mosquito from laying new eggs in treated water. This prevents mosquitoes at all stages from developing and reproducing in an environmentally friendly way.

One bottle contains 250ml, enough for 250m<sup>2</sup> of still water for 4 weeks.

The extremely thin membrane does not affect fish, birds or other animals that live in or out of the water. It does not affect humans, animals, or nature but all mosquito species.

The membrane is not affected by rain as it simply flows through.

### How to use

Drop Aquatain AMF<sup>®</sup> directly into the water.

A thin silicone film is created and spreads itself over the entire water surface.

As soon as a couple of hours later, mosquito larvae and eggs have sunk to the bottom and the multiplication process is stopped.

### Important product information

- Aquatain AMF<sup>®</sup> is a mixture of polydimethylsiloxane (PDMS) 89% and 8% mineral oil, PDMS is a proven silicone oil used in pharmaceuticals, food, and other industries
- Aquatain AMF<sup>®</sup> acts exclusively through physical-mechanical action and therefore does not need to be included in the EU biocidal register.
- PDMS has an NSF permit in the USA which means that it may be used in drinking water reservoirs and has been since 2008.

Shelf life of 36 months from date of manufacture.
