

# PectusPro - Corrective corset

ART.NO 50401

PectusPro is an orthotic spinal stabilization brace for Pectus Carinatum (Pigeon chest), and other chest anomalies. It provides direct anterior-posterior corrective compression forces. The PectusPro brace allows lateral adjustment, by 6.5 cm (PectusPro) & 4 cm (PectusPro-S) of the front panel, for patients presenting Asymmetric Pectus Carinatum. Soft shoulder straps are included for additional stabilization during wear. Equipped with removable, washable and breathable pads for increased comfort. The brace is adjustable with slide adjustment bars and fixed with screws, the aluminum frame is malleable. The orthosis is opened and closed with ratchet closures. Available in two sizes.

**Indications:** Abnormal chest shape, protrusion of both the sternum (breastbone) and the cartilage portion of the ribs, and bowed chest (Pigeon chest).

**Contraindications:** Severe chest deformations.

**Material:** Low density polyethylene, aluminum, polyester padding. Latex free.

**Washing instructions:** The padding can be washed by hand with mild soap and water. Metal and plastic parts are wiped with a damp cloth.

**Accessories:** Replacement Pad and Strap Kits Available.

**Measurement:** Chest circumference in cm.
