

Stabilization of reagents

Prionex® is a superior stabilizer for in vitro diagnostic reagents

- Optimize stability of biological activity
- Improve condition for lyophilisation and heat treatment
- Use as blocking agent in immunological assays
- Protect against denaturation
- Extend shelf life of enzymes and proteins
- Additive-free, high-consistency stabilizer
- Easy-to-use aqueous solution

Prionex® is a 10% aqueous solution of a polypeptide fraction of highly purified dermal collagen of porcine origin which has excellent protein stabilizing properties. Prionex® is prepared by partial hydrolysis and is terminally sterilized. It is free from cartilage, bone and plasma components and is therefore a pure form of partially hydrolyzed gelatine type A.

Other Advantages

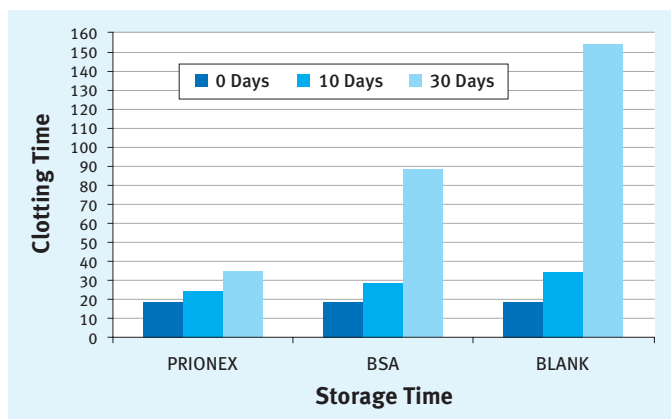

- Non-toxic
- Non-antigenic
- Filterable through a 0.2 µm membrane
- Heat-stable
- Free from nucleic acids, polysaccharides and lipids
- Free from any additives

Prionex 10%, the BSA alternative which optimizes conditions for proteins/enzymes.

Product	Packaging	Article No.
Prionex®	Bottles 100 ml, 500 ml, 1000 ml	069-03

Increase storage stability

Prionex® shows protein stabilization properties and increases the shelf life of a protein preparation

Increase temperature stability

Prionex® enhances protein stability at elevated temperatures and this prevents denaturation during pasteurization or sanitization by heat and enhances long-term storage stability.

Preserves activity

Prionex® maintains biological activity during lyophilisation, freeze-thaw cycles, during treatment by urea or ethanol.

Prevents adsorption

Prionex® prevents protein adsorption. Adsorption of peptides and proteins on glass and plastic surfaces is a common phenomenon that lead to loss protein content or activity.
