

TLH Simplified... Without Compromise

The Advincula Arch™

"The Advincula Arch is an innovative uterine manipulator. When combined with the Arch Koh-Efficient™ it provides ease of use and functionality during all the critical stages of a TLH."

- Arnold Advincula, MD
FACOG, FACS

Designed for Ease of Use and Functionality

Simple

- Faster setup – Integrated Koh Cup™ and pre-attached occluder balloon facilitates assembly
- Simple, lightweight design
- Ease of insertion with our easy load Koh-Efficient™ System

Uncompromised Functionality

- Durability – Provides unprecedented simplicity in a reusable design compared to disposable manipulators that "buckle under pressure"
- Superior visualization and control – the right colpotomy cup for every TLH
- Outstanding anteversion and retroversion in a durable configuration

During TLH procedures, the Koh-Efficient creates a "margin of safety" by providing a visual landmark and backstop for full circumferential colpotomy, as well as distancing the ureters during the incision. Vaginal length is maximized and pneumoperitoneum is maintained.

Advincula Arch™ Designed for Strength and Durability

Provides:

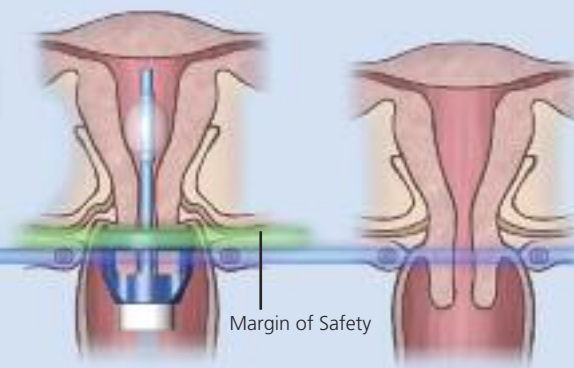

- Ease of use
- Functionality for a faster, safer TLH

An alternative to the articulating RUMI® II, the reusable Advincula Arch™ is ideal for physicians who prefer the simple and lightweight design of a disposable uterine manipulator but would like additional strength.

Some physicians choose the Advincula Arch™ as they prefer executing anteversion/retroversion of the uterus manually or with the Uterine Positioning System™. The radial design permits easy insertion from any angle and its unique curve provides outstanding elevation for superior visualization and control.

The Advincula Arch™ has a specifically designed Koh-Efficient™ system enabling the physician to safely insert and correctly position the device for use.

The Koh-Efficient™ Creates a “Margin of Safety” by Providing a Visual Landmark and Backstop for Full Circumferential Colpotomy
