

## UNDERCOAT DESHEDDING TOOLS

### WHY FURminator®?

A quality deShedding tool, like the **FURminator® Undercoat DeShedding Tool** removes significantly more loose hair than a standard comb or brush. Undercoat deShedding is not the same as brushing or combing – it removes loose, dead hair from shedding without cutting or damaging the top coat\*. This is what makes FURminator®, the Original DeShedding Tool Brand developed by professional groomers a popular choice among loving pet owners worldwide.

### UNDERCOAT DESHEDDING TOOL - SMALL DOG SHORT HAIR

FURrejector button releases hair with ease, making deShedding easier than ever

Ergonomic handle for comfort and ease of use

Skin Guard® glides over skin, prevents digging in at edges

Stainless steel deShedding edge reaches through topcoat to safely and easily remove loose hair and undercoat without damaging topcoat or cutting skin\*

Curved Edge conforms to pet's natural build and shape for comfort

Edge Guard protects teeth when tool is stored

### BRUSHING VS DESHEDDING

Brushing and combing are not the same as undercoat deShedding. While brushing primarily detangles and removes topcoat debris, deShedding removes the loose, dead undercoat from shedding without cutting or damaging the top coat.\*

**FURminator®**

DESHED

WEEKLY

REDUCE HAIR LOST FROM REGULAR SHEDDING

\*when used as directed

## UNDERCOAT DESHEDDING TOOLS

REMOVES LOOSE HAIR FROM SHEDDING UP TO 99%. USE 10-20 MINS PER WEEK.

deShed your pet weekly to remove loose hair before your pet has a chance to shed it on the surfaces of your home! Our quality deShedding tools are not only tailored to your pet's breed size and coat type, they are designed with the best-in-class features to provide easy, safe and effective loose hair removal. Use once or twice each week for 10 to 20 minutes, or more often if necessary.

DOG

## HOW TO USE THE EDGE GUARD

The Edge Guard is a special white cover built into the deShedding tool to store and protect the edge's teeth when the tool is not in use. Follow the step by step instructions below for the correct usage. With more practice, the steps will become naturally quick and easy!

### TO LOCK

1. Push the FURejector® button all the way into cavity (in and down).

2. Hold in place until you hear the "click" sound.

### TO UNLOCK

3. Push the locked FURejector® button further into cavity (in and up).

4. Immediately release.
