

B&T compensator cal. 5.56 mm (.223) with interface for Rotex™-IIA

B&T compensator cal. 5.56 mm (.223) with interface for Rotex™-IIA

Compensators (muzzle breaks) have two tasks to fulfil. The primary task is of course to dampen the recoil of the gun and the muzzle flip in order to make the gun more pleasant to shoot and to return onto the target faster. But furthermore a compensator also serves as a coupling for mounting a suppressor. All B&T compensators are ready to mount a B&T Rotex-IIA suppressor without the use of any tools within seconds.

Remarks

Article no.:	SD-Komp556
Calibre	.223 (5.56 x 45 mm, .223 Rem., etc.)
Suppressor connector	Rotex-IIA interface in flash hider
Remarks	incl. spacer set for correct alignment
